January 8, Due: Friday, January 12

## **Problem 1.**

Show that for any three nonempty sets  $X, Y, Z$

$$\left| (X^Y)^Z \right| = \left| X^{(Y \times Z)} \right|.$$

## **Problem 2.**

Show that any set of pairwise nonintersecting disks on the plane is countable.

### **Problem 3.**

Construct a set of sets  $A$  such that  $\bigcap A = \emptyset$ , but for any countable subset  $B \subset A$   $\bigcap B \neq \emptyset$ .

### **Problem 4.**

Show that any two cycles  $\sigma_1$  and  $\sigma_2$  of the same length in  $S_n$  are conjugate, i.e. there exists  $g \in S_n$  such that  $\sigma_1 = g\sigma_2g^{-1}$ .

### **Problem 5.**

Show that if  $N$  and  $M$  are normal subgroups of a group  $G$  with  $M \cap N = \{e\}$  then every two elements  $m \in M$ ,  $n \in N$  commute.

### **Problem 6.**

Describe all cyclic subgroups of  $D_n$ .

### **Problem 7.**

Prove that a circle is not homeomorphic to an annulus.
