What is Music

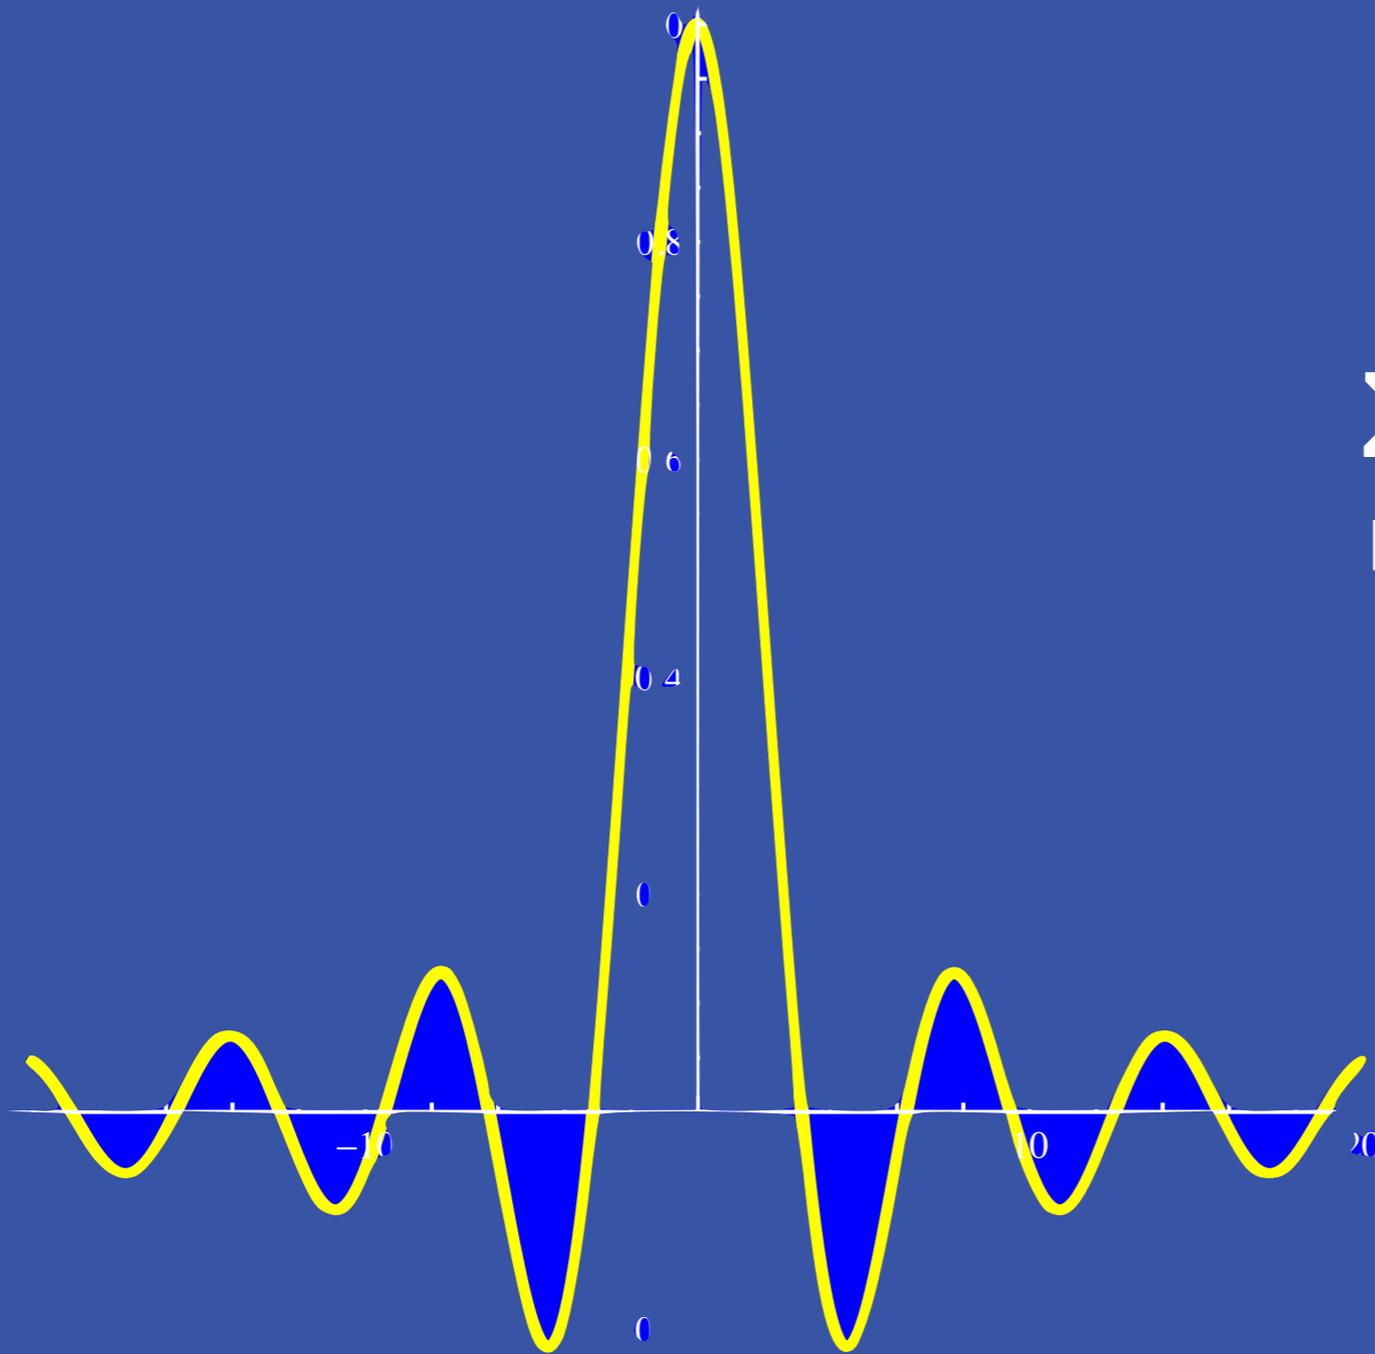

Just a function!

Reconstruction

Whittaker-Shannon
formula

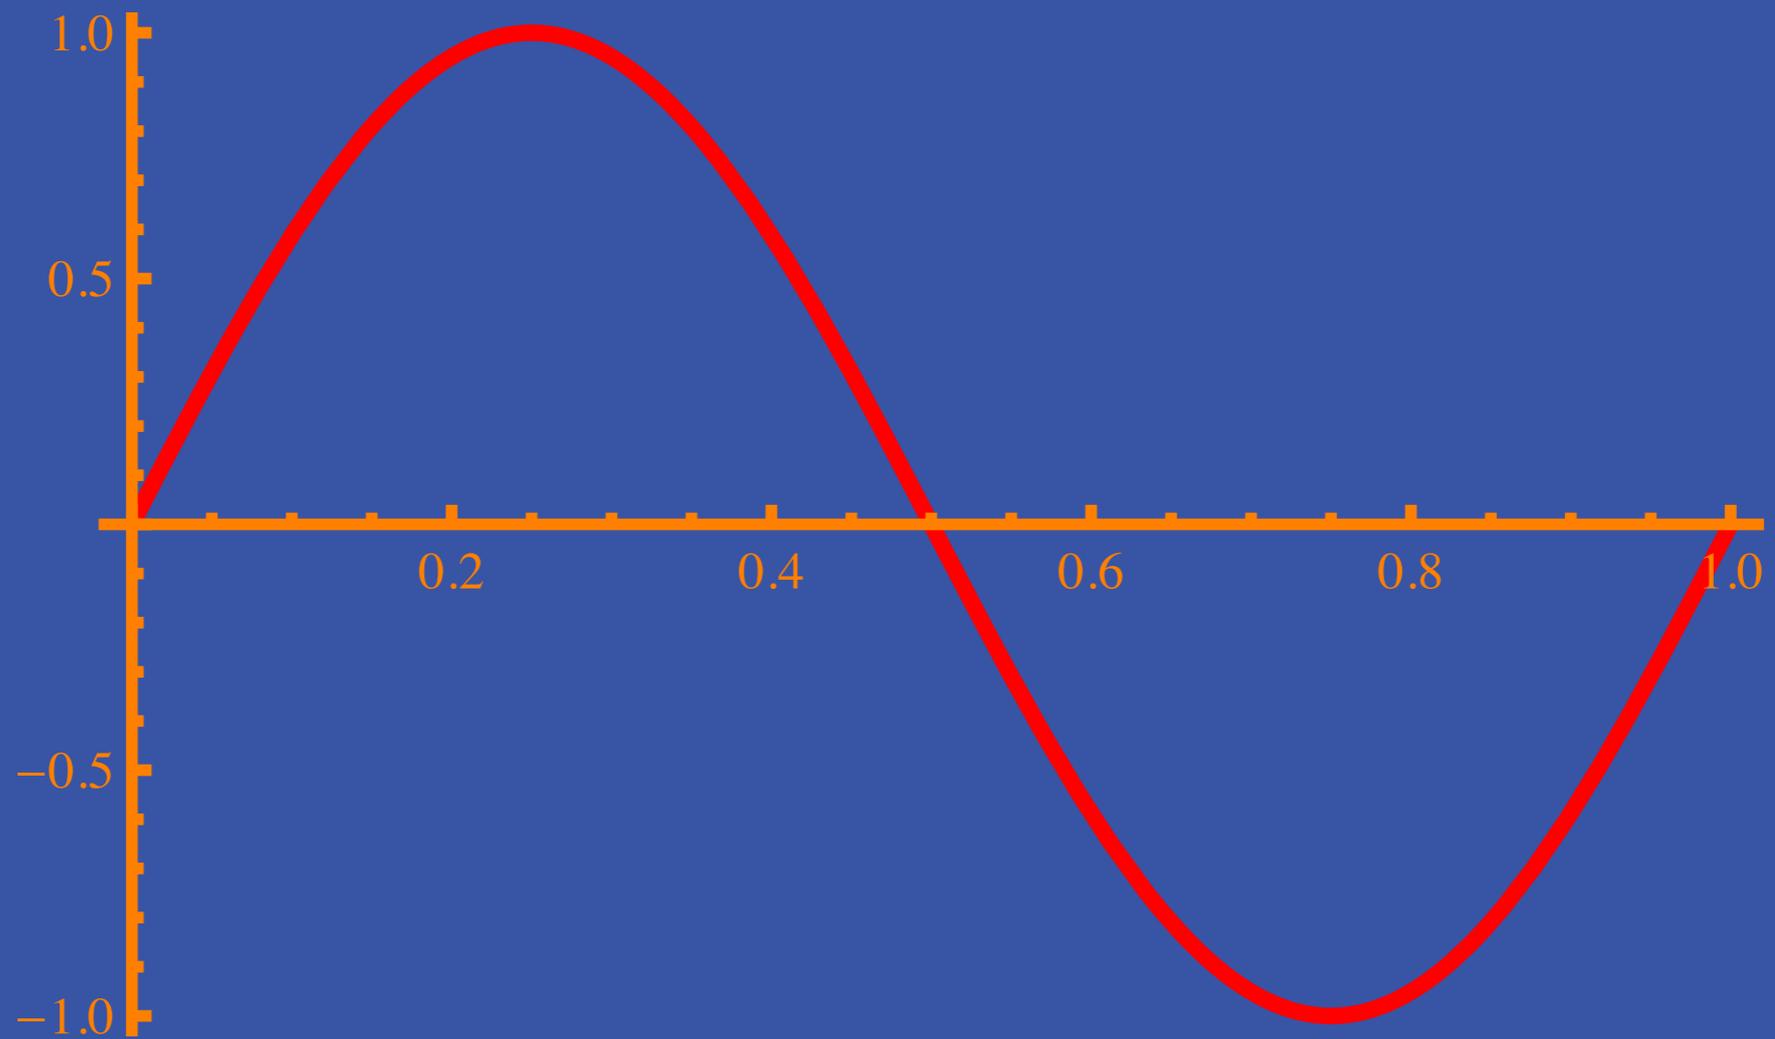

$$\sum_n x(n) \text{sinc}(t-n)$$

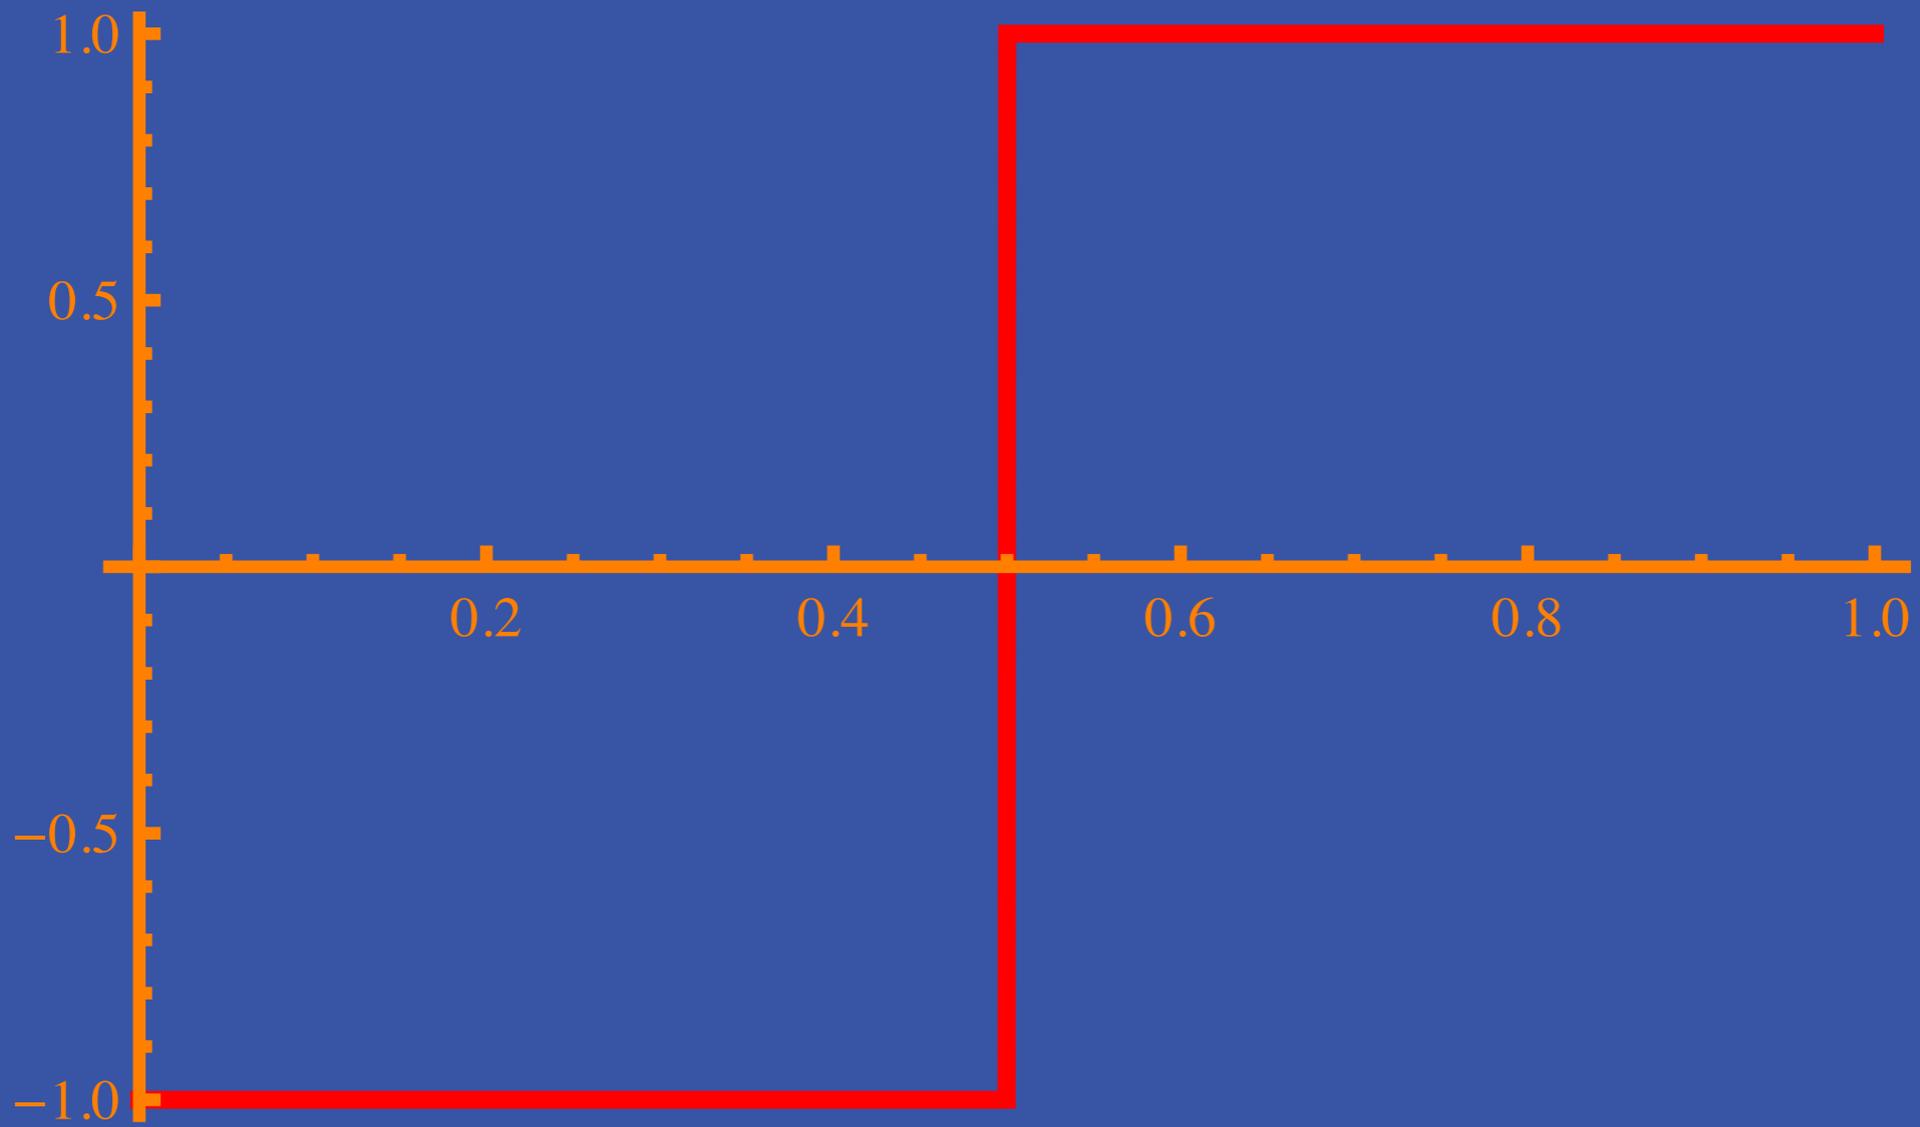

A Wave Form

Bilding block

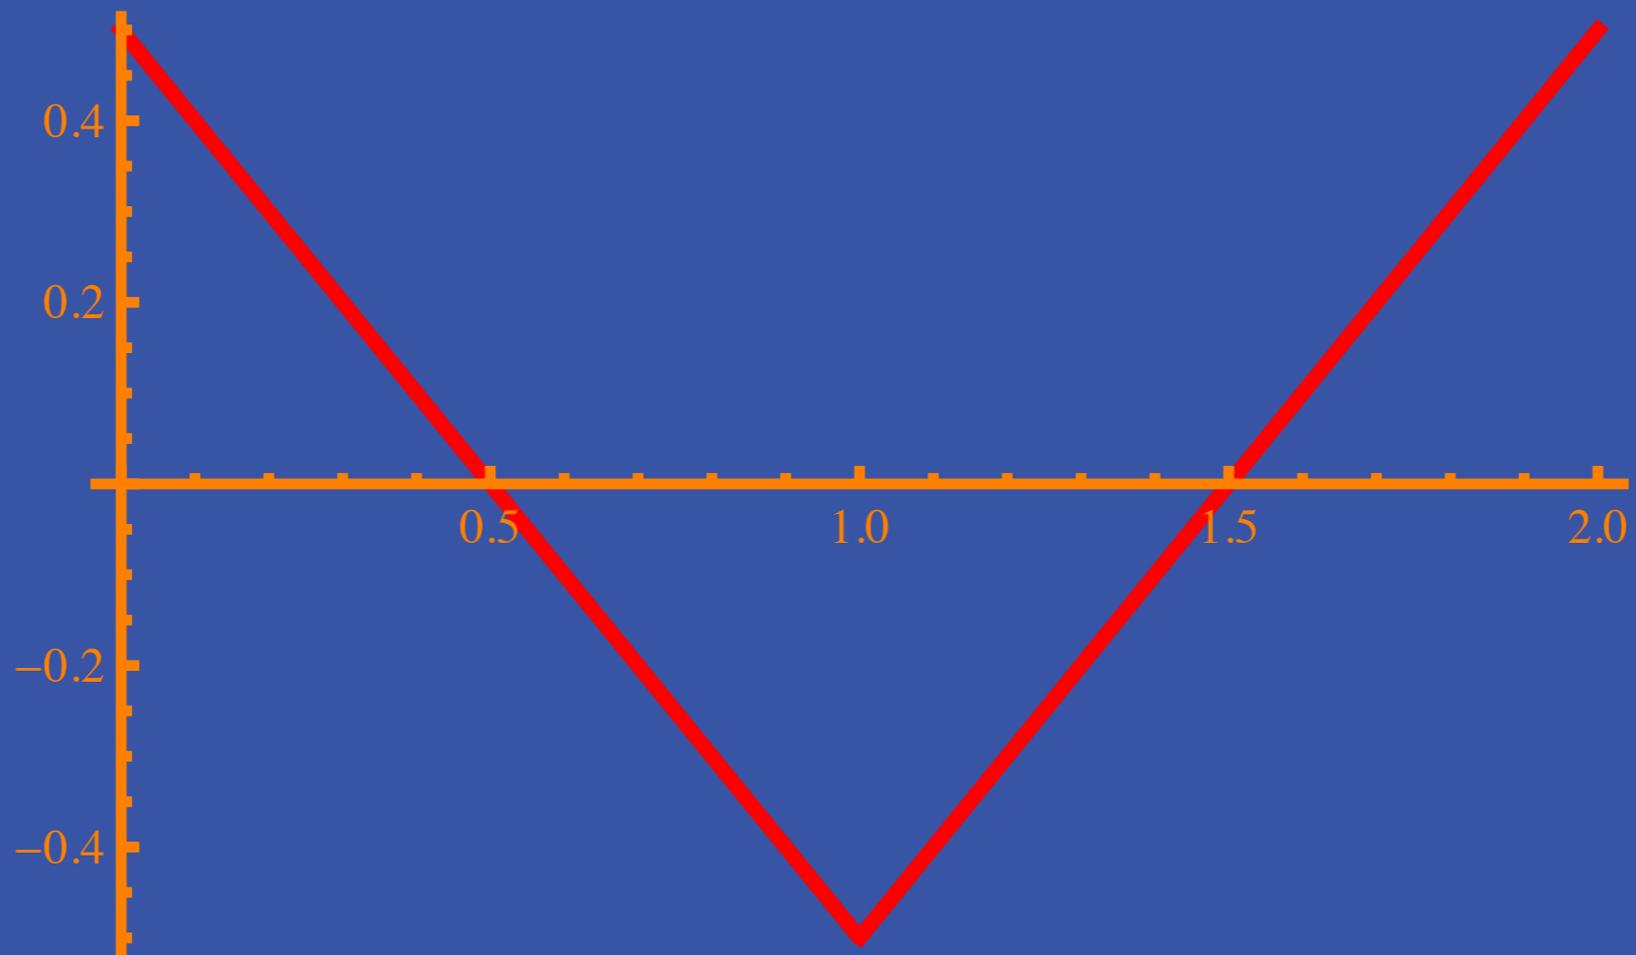

Sin

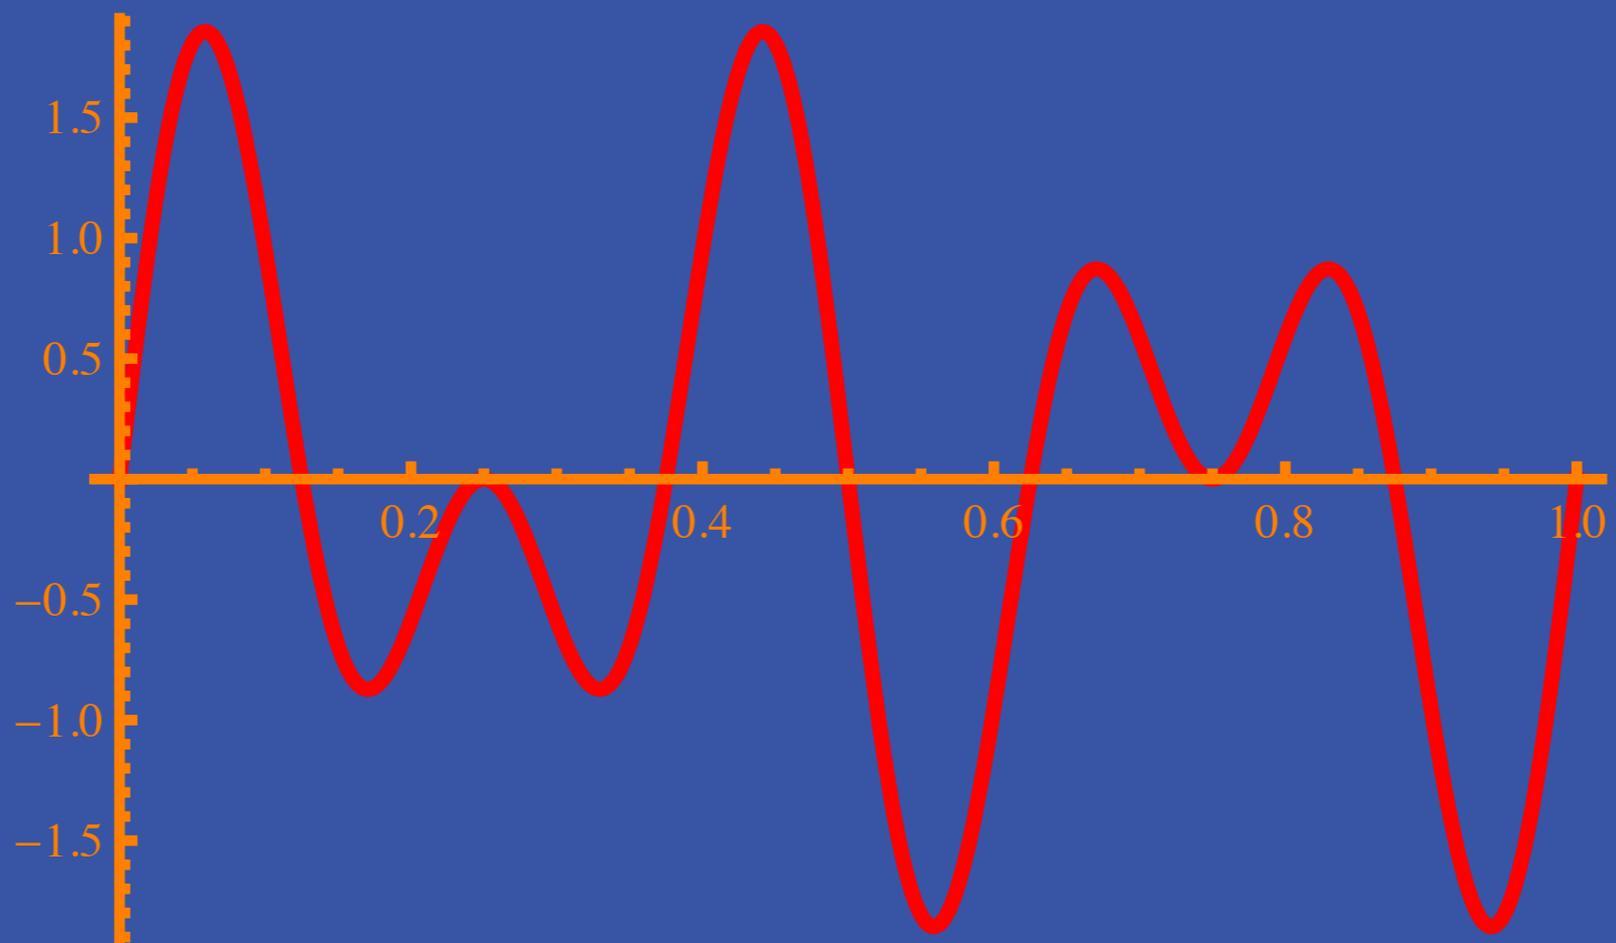

Sign

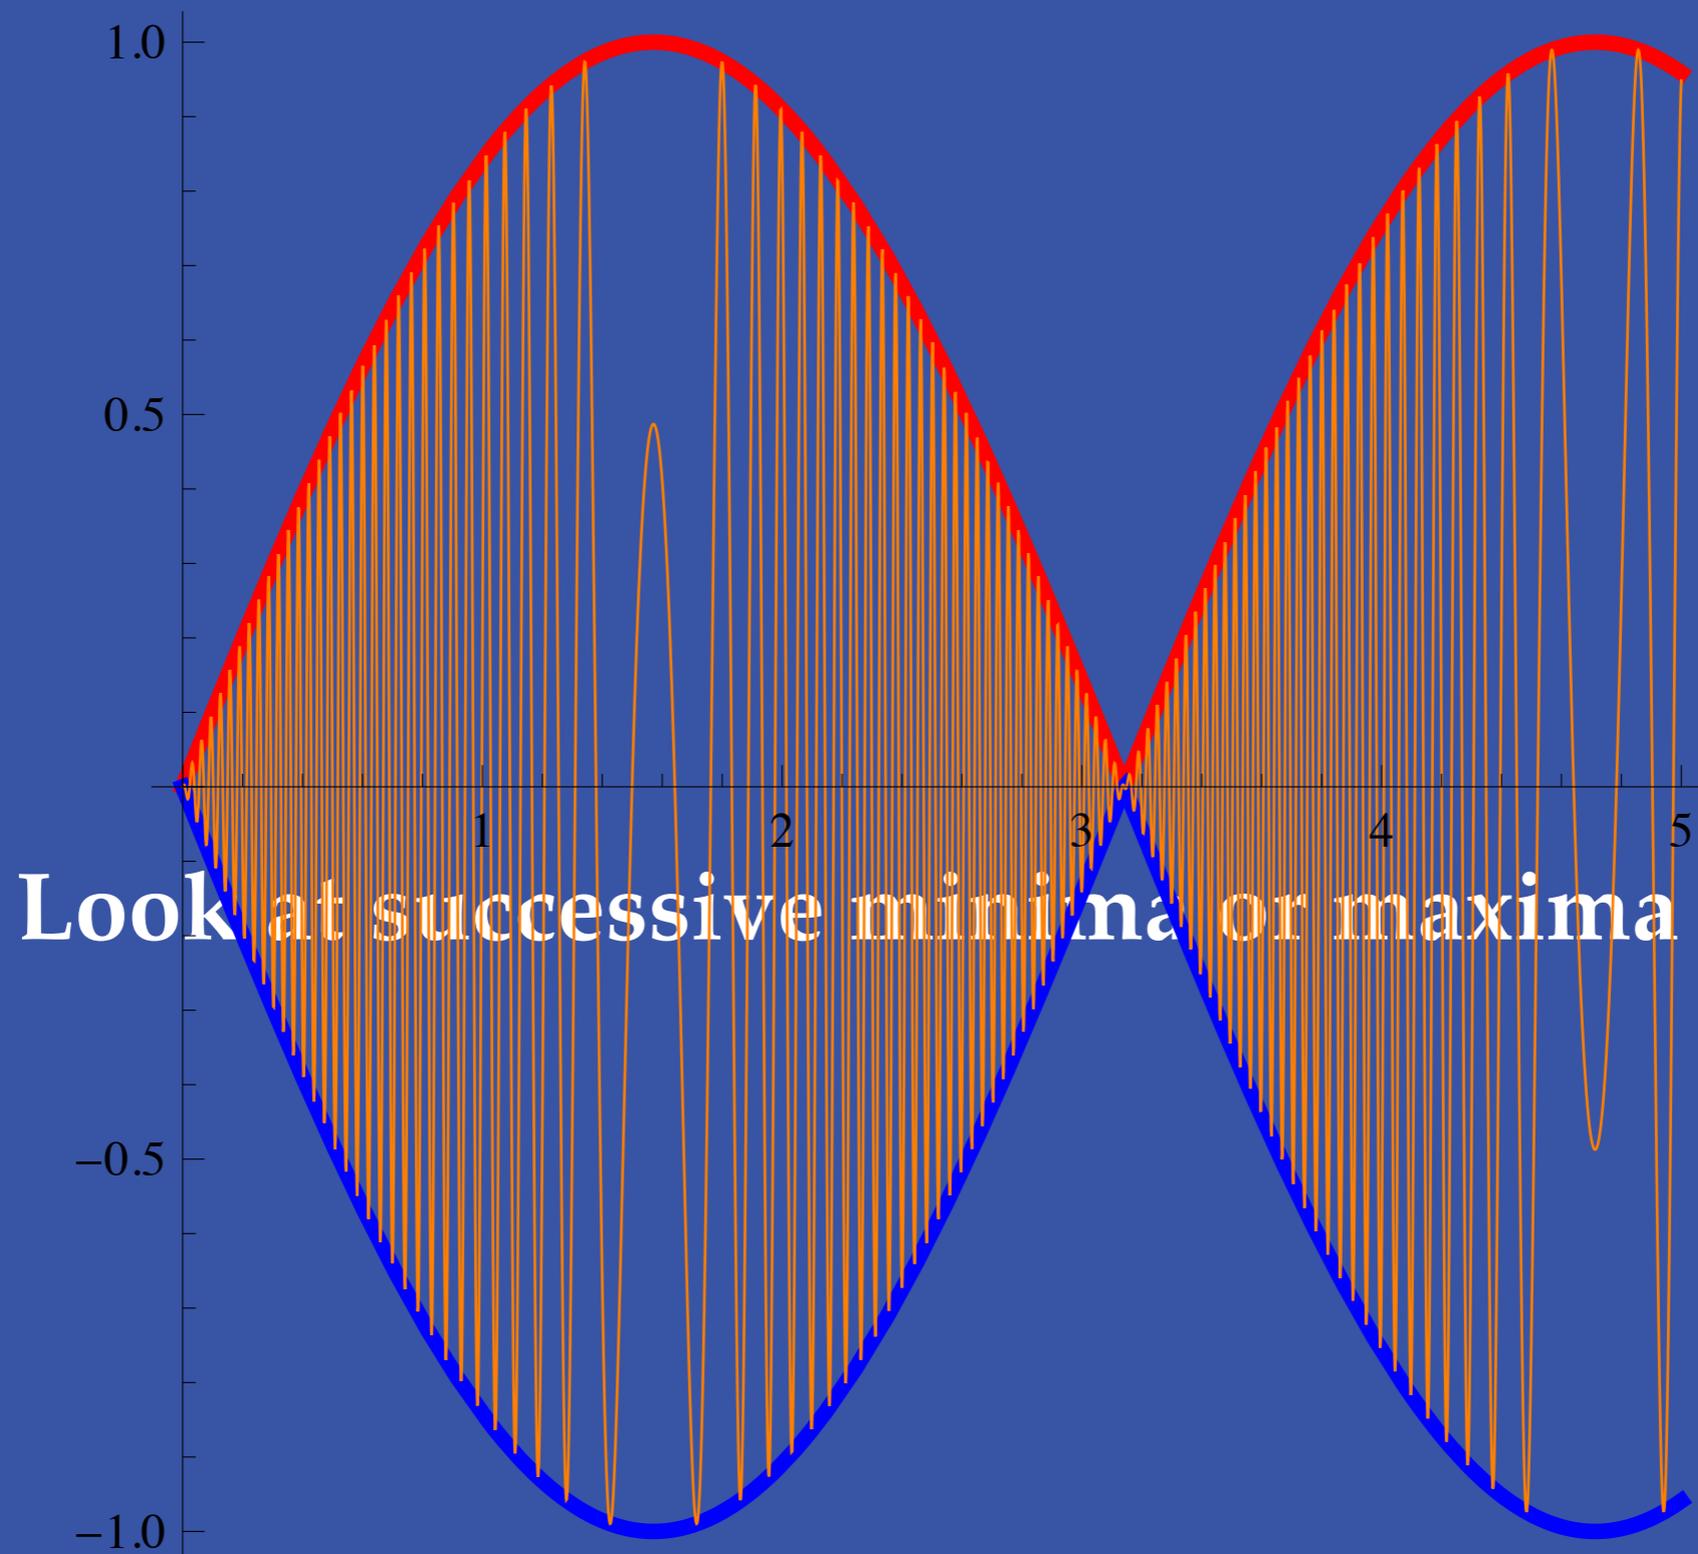

Abs

Sum

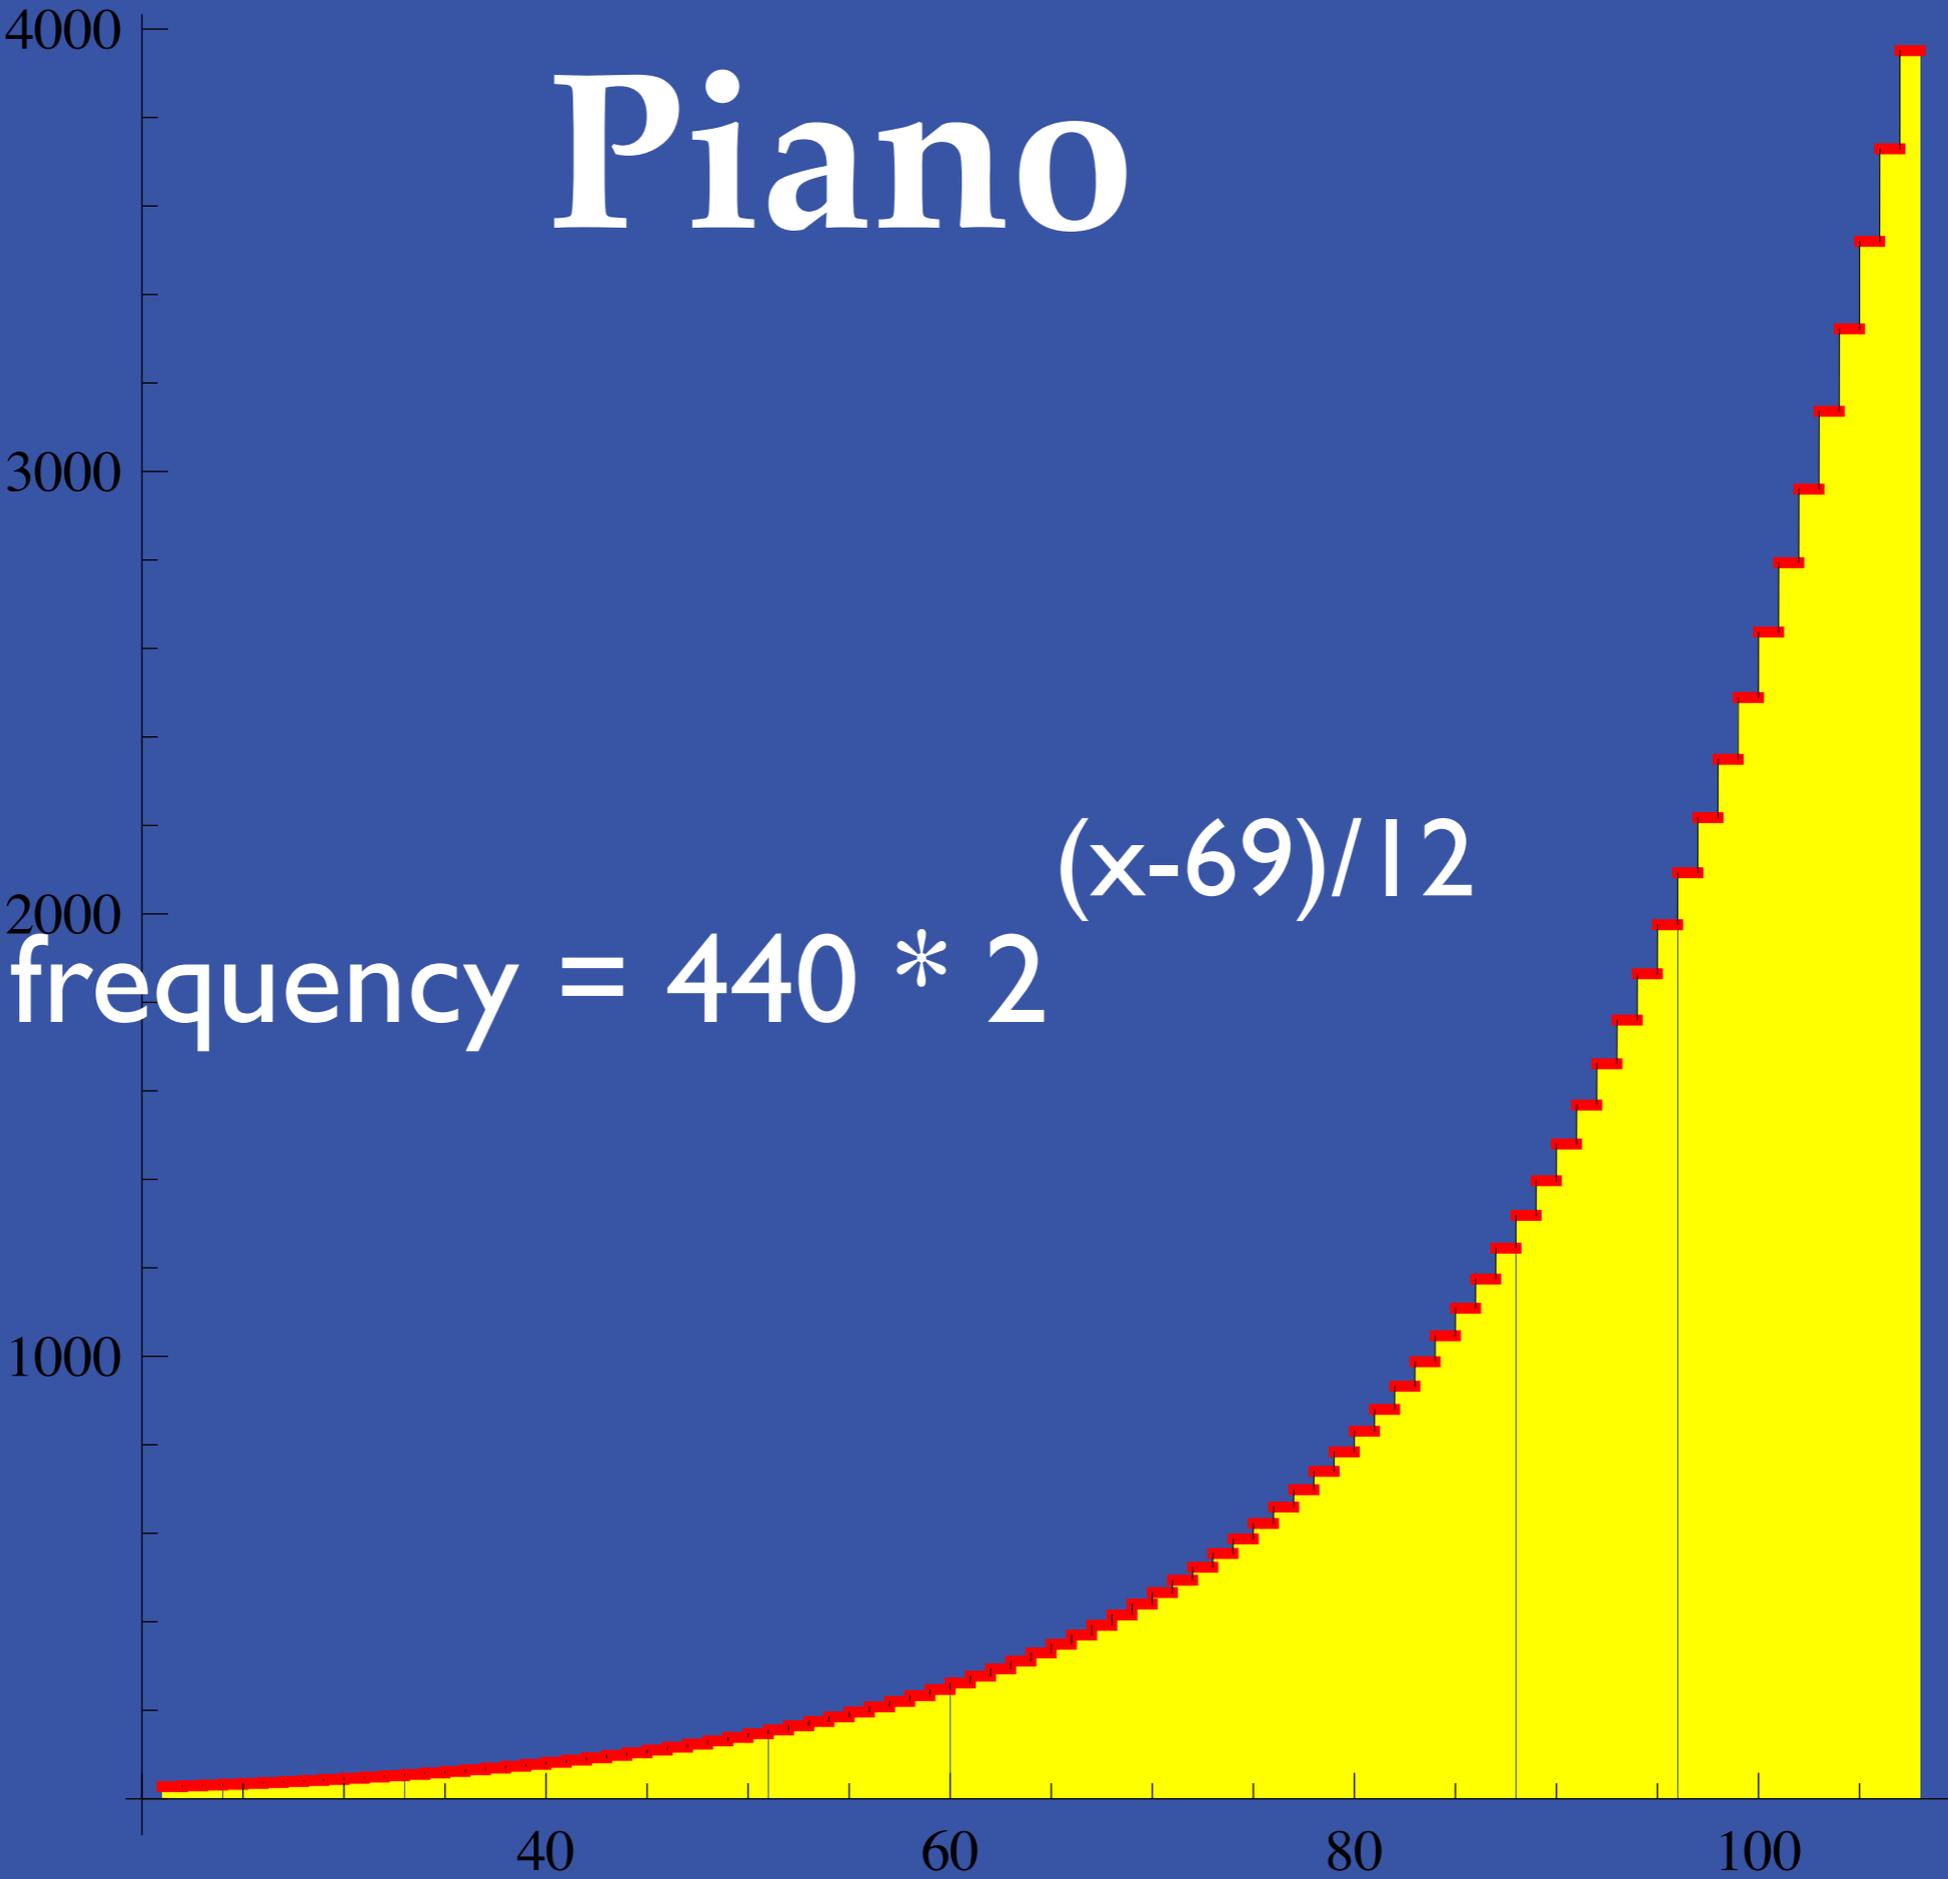

Hull

Piano

$$\text{frequency} = 440 * 2^{(x-69)/12}$$

5 Tone

Frequency change is $5^{1/5}$

Stockhausen: 1928-2007

Stockhausen

KREUZSPIEL

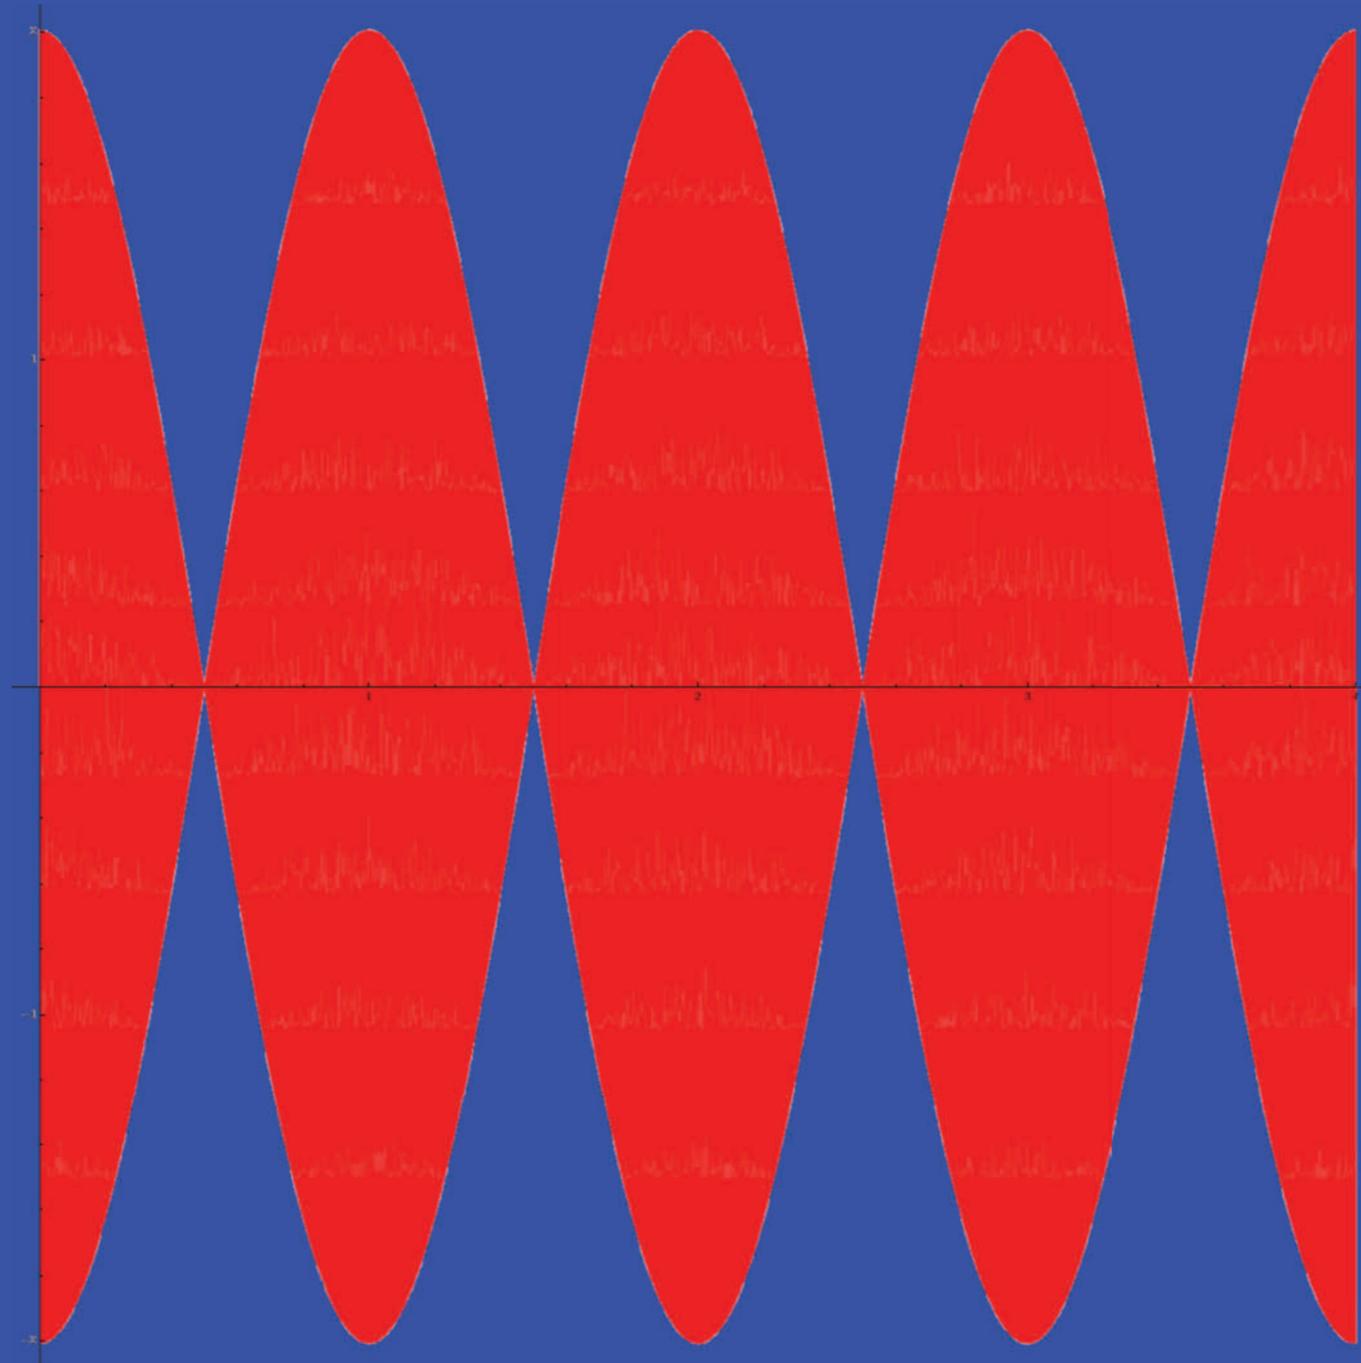

(1951)

16 Tone

Frequency change is $2^{1/16}$

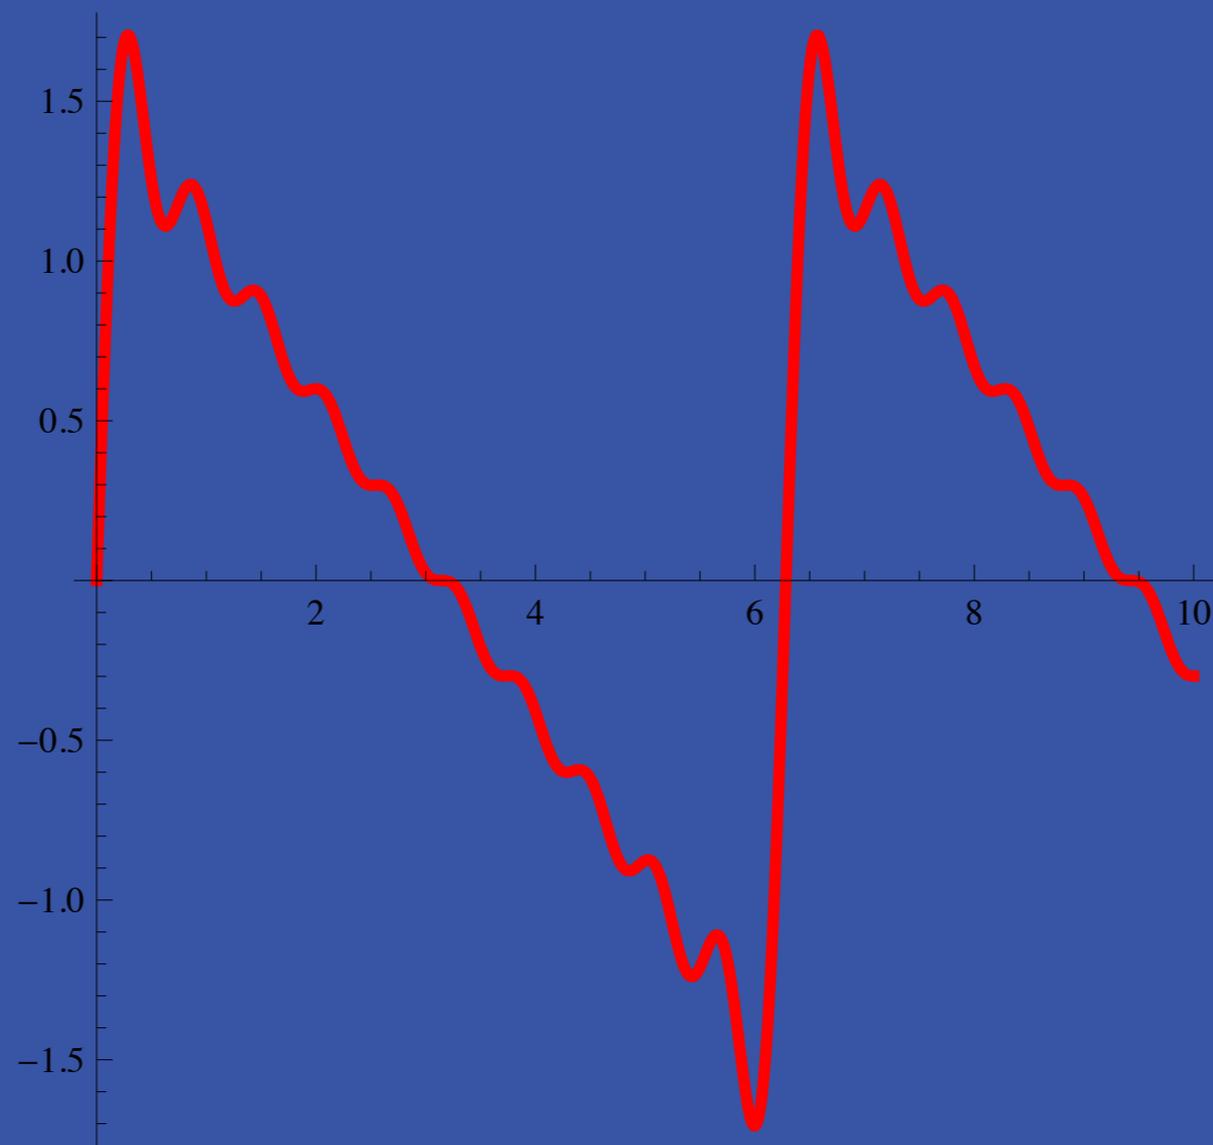

Interference

$$f(x) = \sin(300x) + \sin(301x)$$

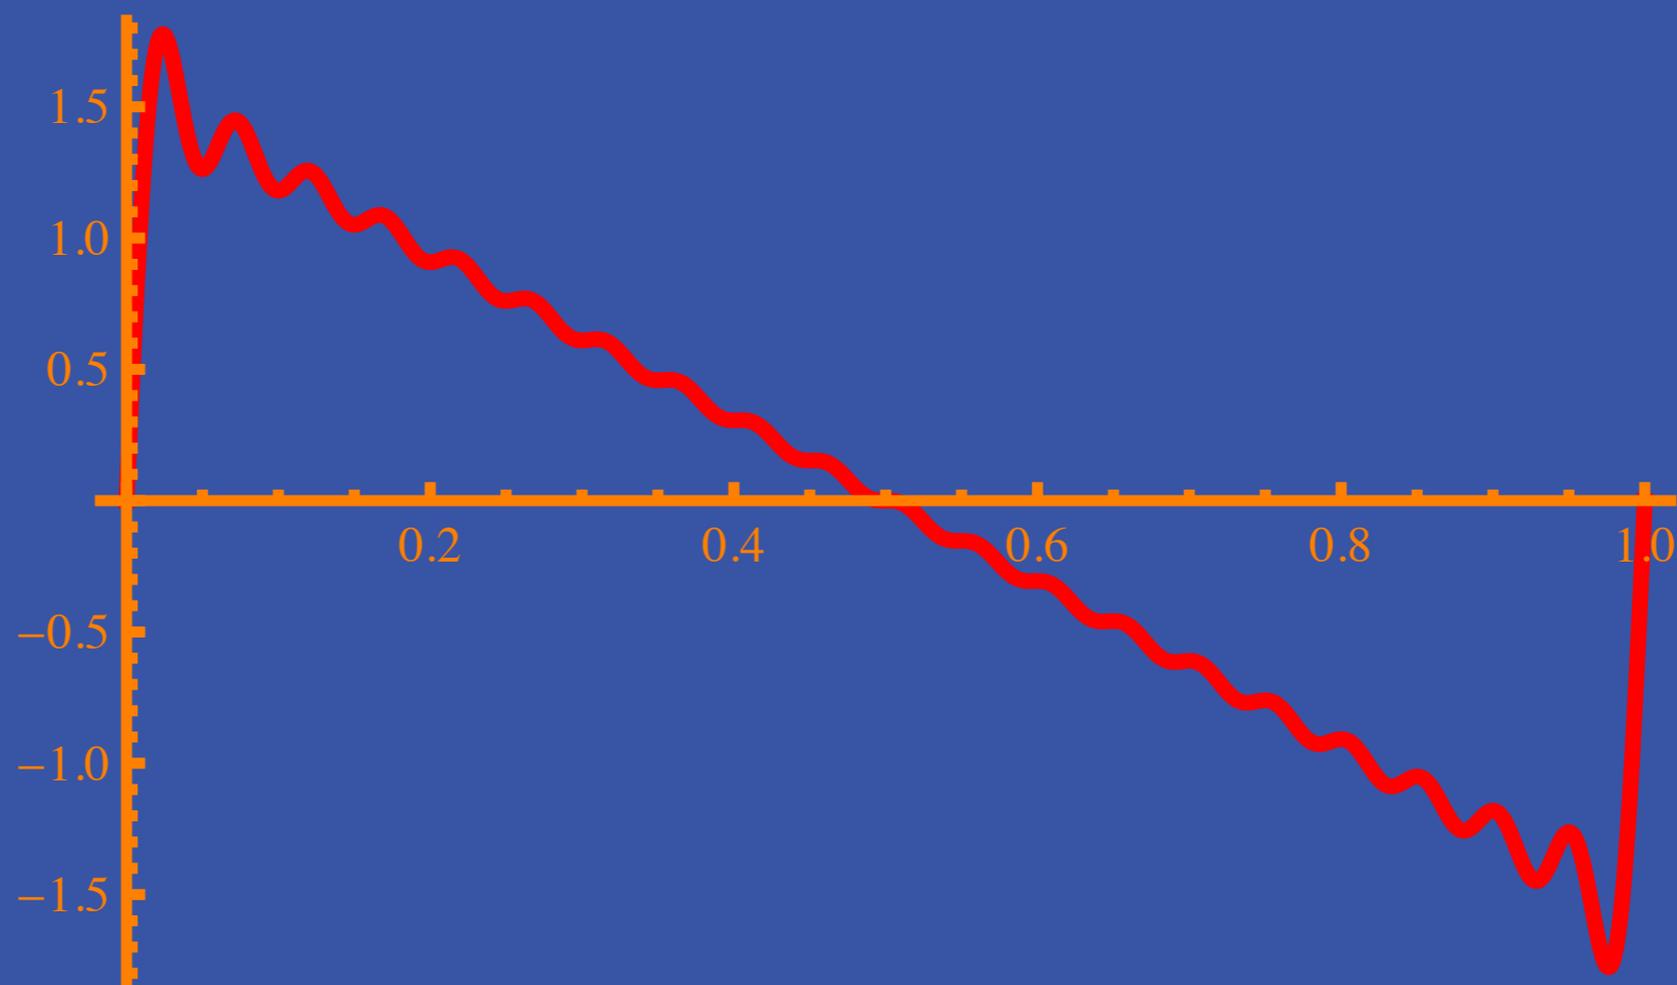

Approximating functions

$$f(x) = \sin(x)/1 + \sin(2x)/2 + \sin(3x)/3 + \dots \sin(10x)/10$$

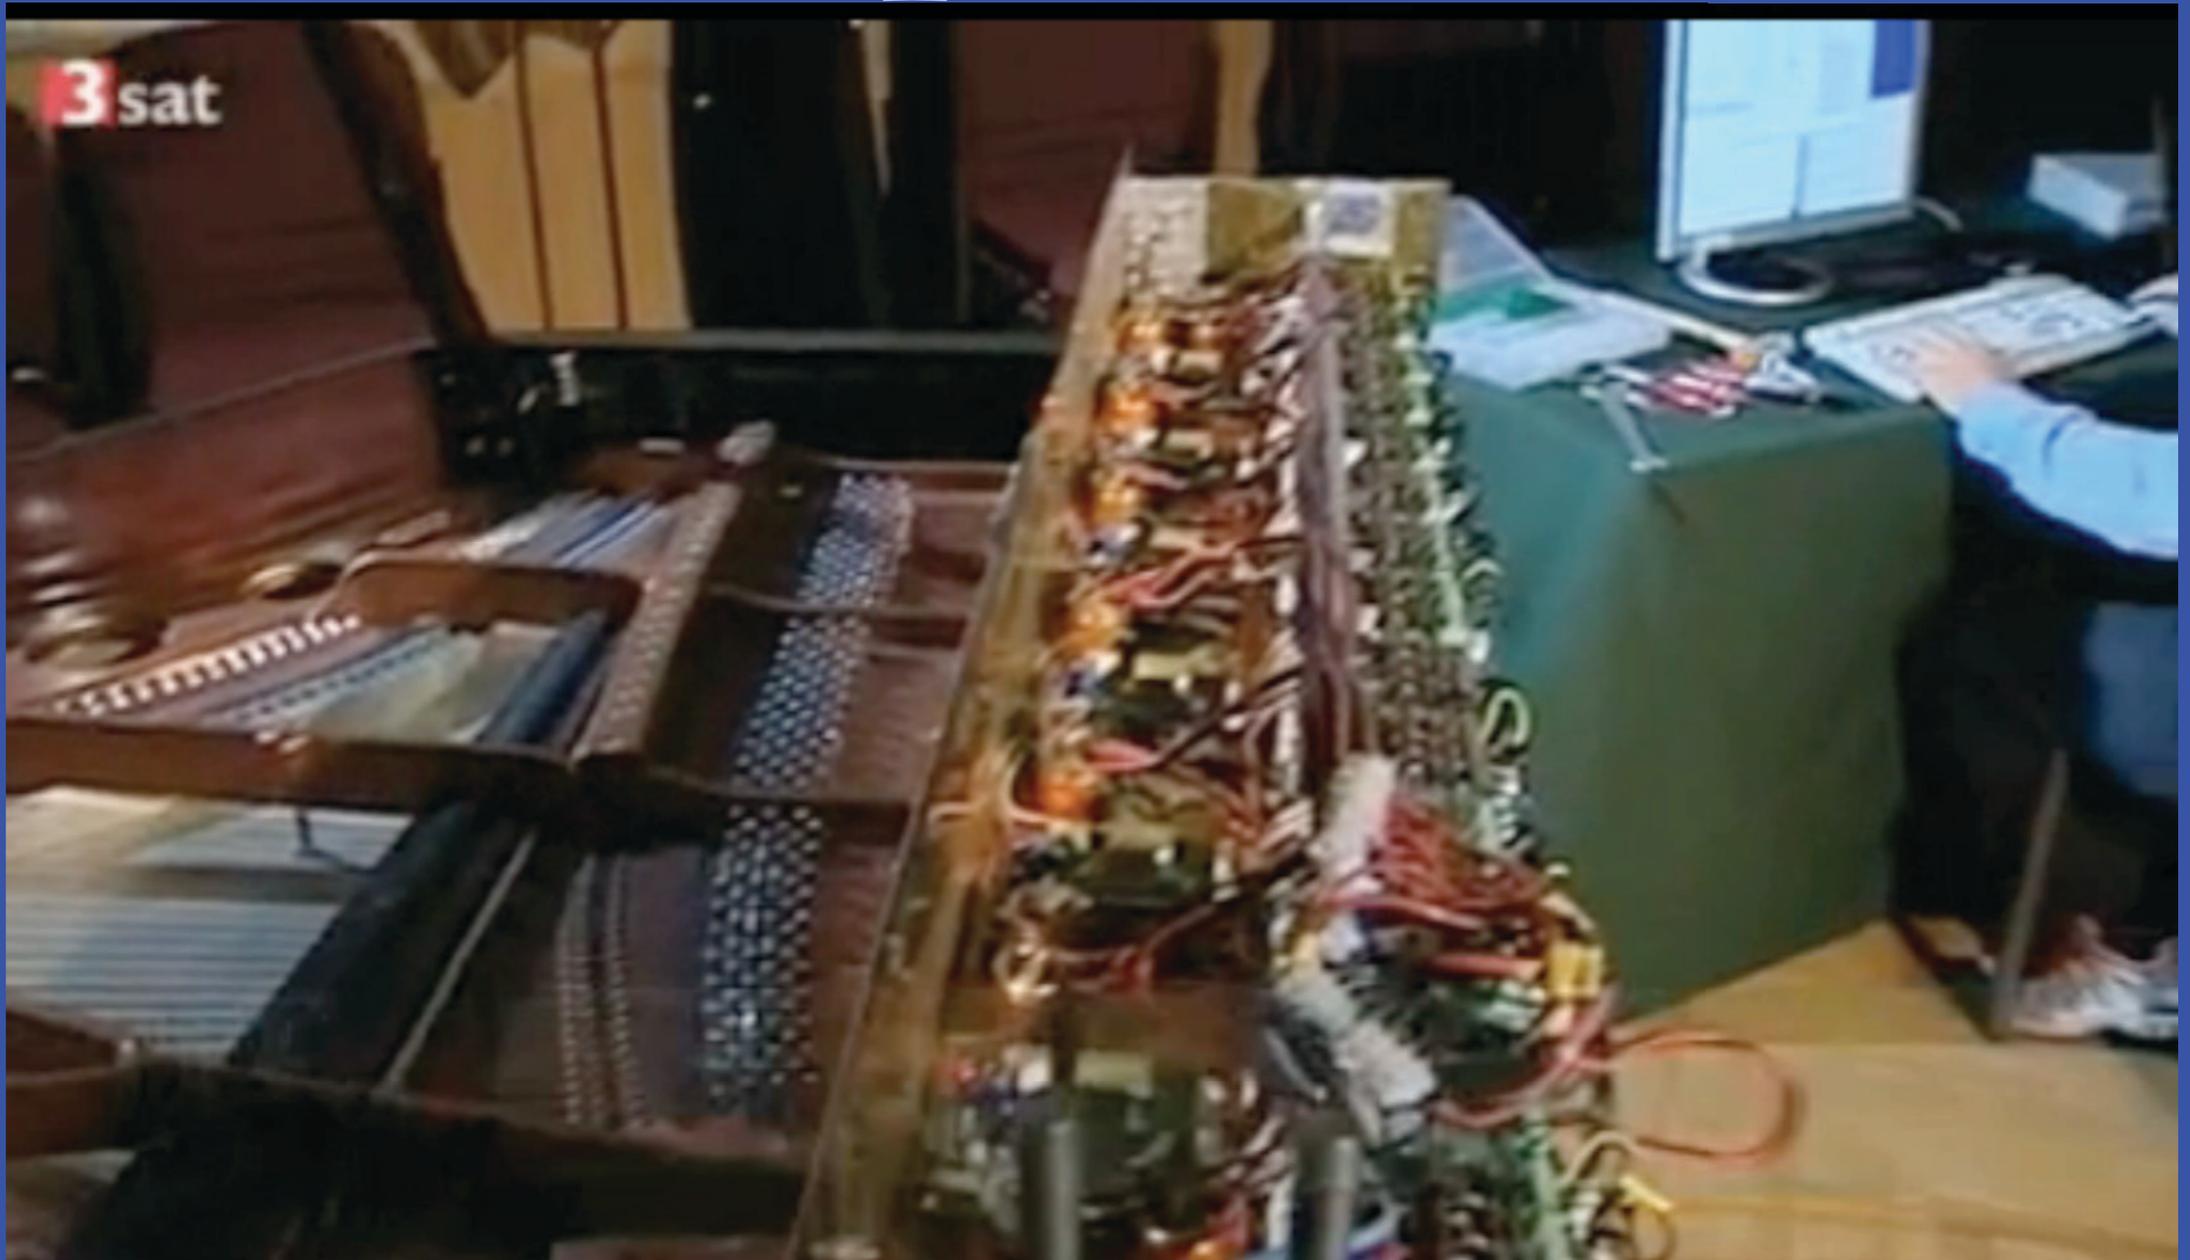

Approximating functions

$$f(x) = \sin(x)/1 + \sin(2x)/2 + \sin(3x)/3 + \dots \sin(20x)/20$$

Sound Decomposition

Speaking Piano, Source: 3Sat, 2009

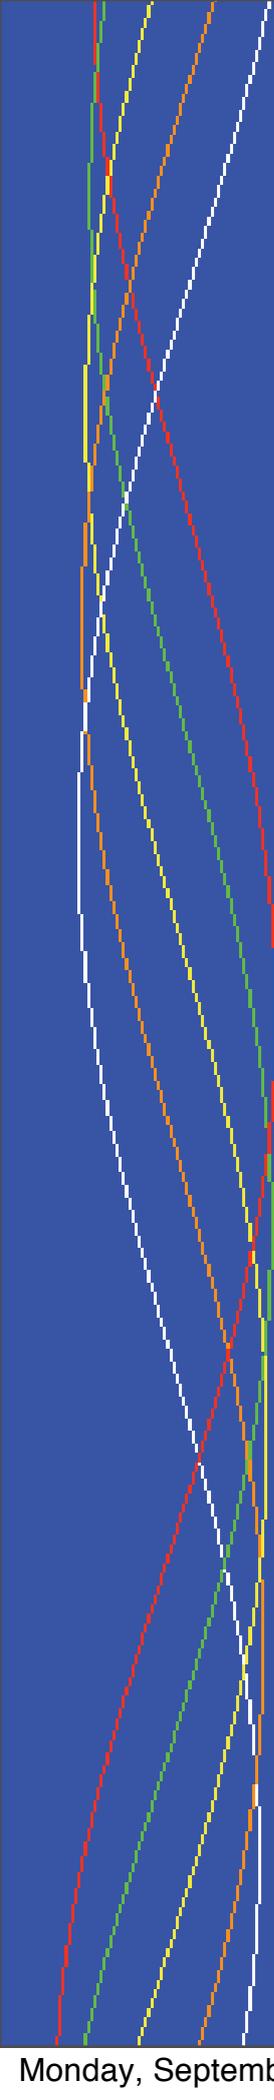

Problem 1: How does this sound?

$$f(x) = \sin(10000 \sqrt{x})$$

$$f(x) = \sin(10000 \sqrt{x})$$

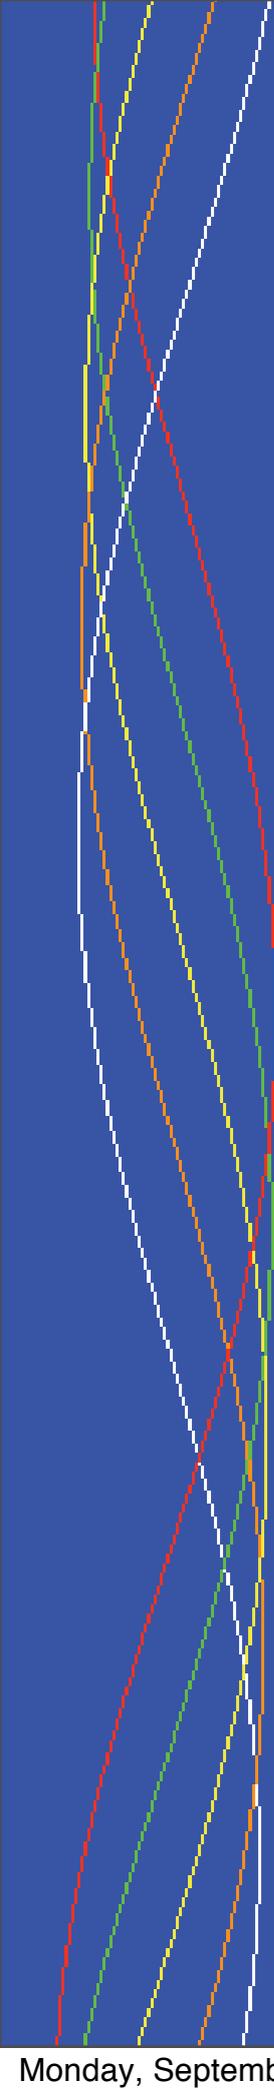

Problem 2: How does this sound?

$$f(x) = \sin(1000 x^* x)$$

$$f(x) = \sin(1000 x^* x)$$

Problem 3: How does this sound?

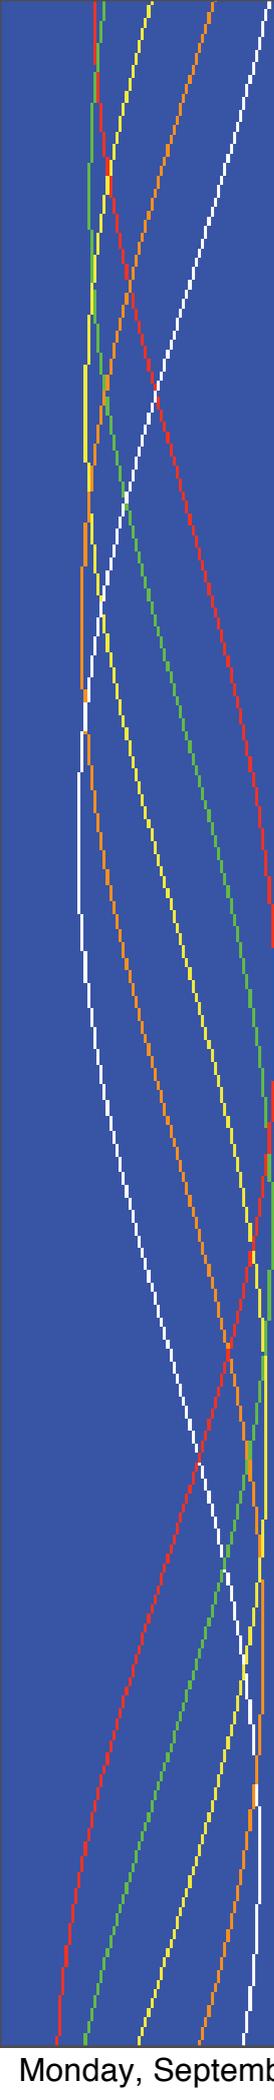

$$f(x) = \sin(\sin(1000x))$$

$$f(x) = \sin(\sin(1000x))$$

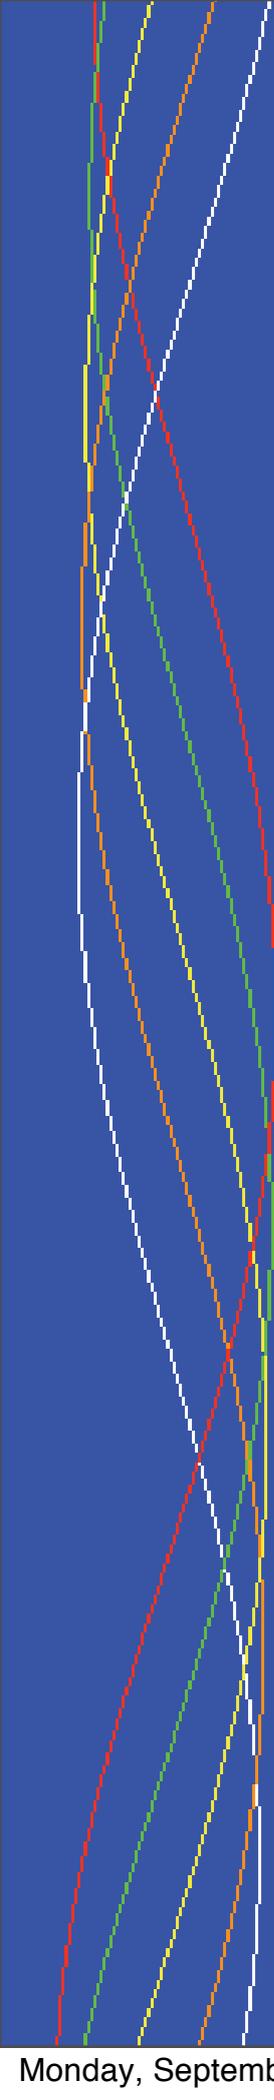

Frequency modulation

Problem 4: How does this sound?

$$f(x) = \sin(x) \sin(1000 x)$$

A decorative vertical strip on the left side of the slide, featuring several overlapping, slightly curved lines in white, red, green, yellow, and orange.
$$f(x) = \sin(x) \sin(1000 x)$$

Amplitude modulation
