Problem 1) TF questions (10 points) No justifications are needed.

1)  T  F  $\lim_{x \rightarrow 0} \frac{\sin^2(5x)}{(3x)^2} = \frac{5^2}{3^2}.$

2)  T  F  $\ln(|7x|)$  has a root at  $x = 0.$

3)  T  F  $\cos(\pi/3) = 1/2.$

4)  T  F  $f(x) = |5 + 4 \sin(x)|$  is differentiable everywhere.

5)  T  F  $f(x) = \frac{(x^2 - 2x + 1)^3}{(1-x)^2}$  has a limit at  $x = 1.$

6)  T  F The function  $f(x) = |7x|$  has a critical point at  $x = 0.$

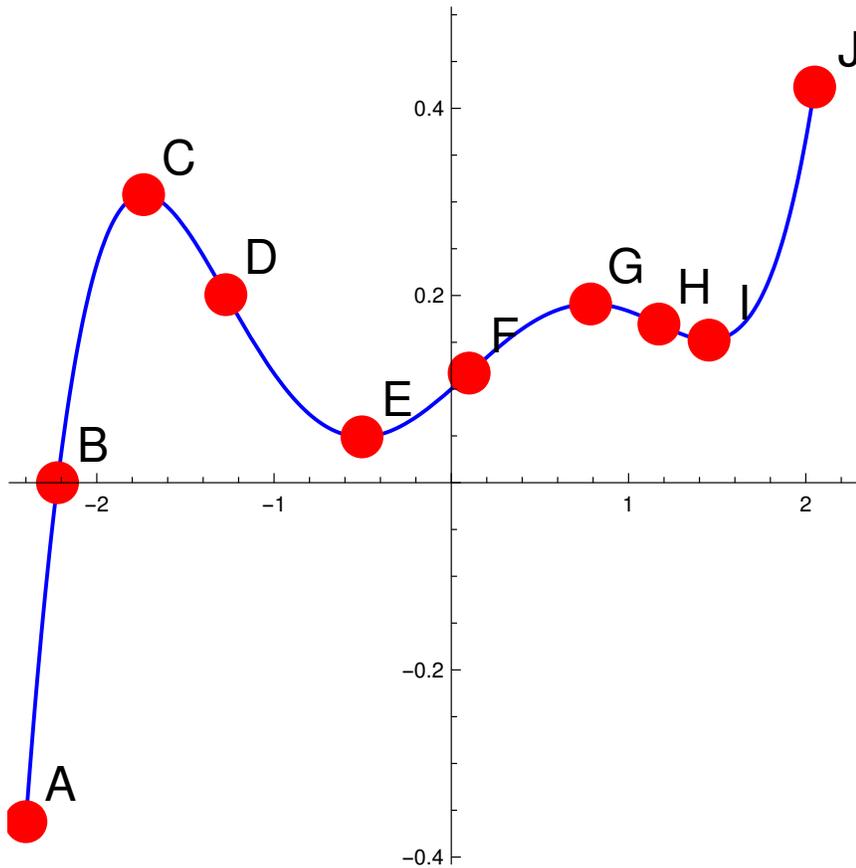

7)  T  F The function  $f(x) = \cos(\frac{1}{7x})$  with the understanding  $f(0) = 0$  is continuous everywhere.

8)  T  F The function  $(\cos(x) - 1)/x^2$  with the understanding  $f(0) = -1/2$  is continuous everywhere.

9)  T  F  $\frac{d}{dx} \ln(7 - x) = \frac{-1}{7-x}.$

10)  T  F The derivative of  $f/g$  is  $\frac{f'g' - fg}{g^2}.$

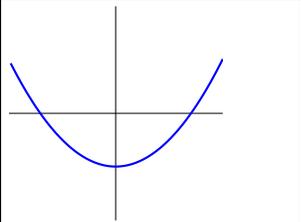

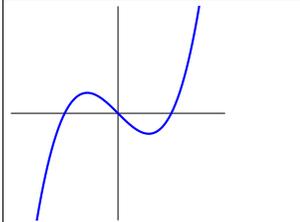

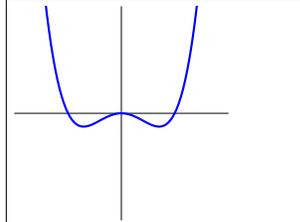

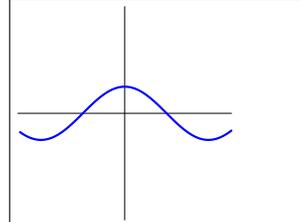

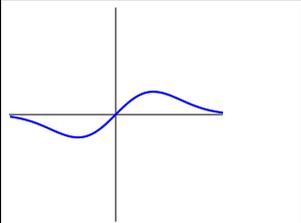

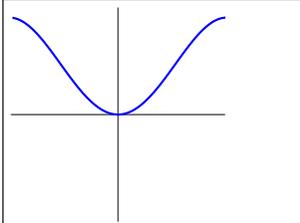

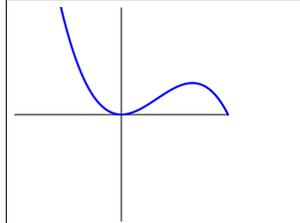

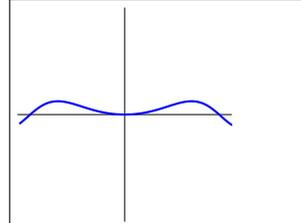

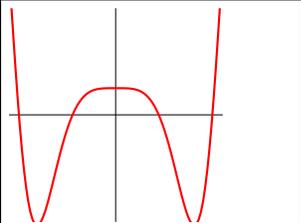

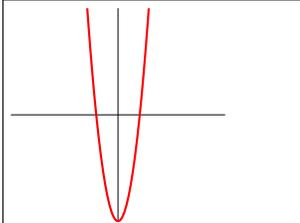

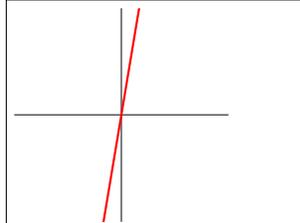

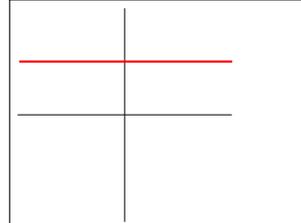

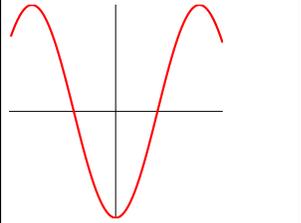

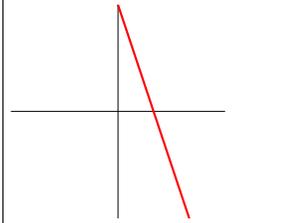

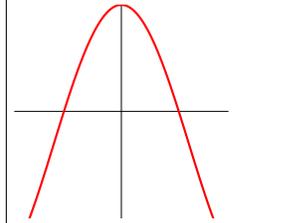

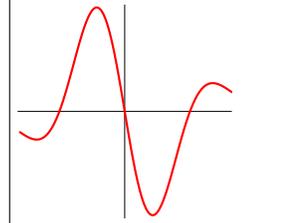

Problem 2) Analysis (10 points) No justifications are needed.

- (2 points) List the points A-J which are roots of  $f$ .
- (2 points) List the points A-J are inflection points.
- (2 points) List the points A-J that are local maxima.
- (2 points) List the points A-J that are local minima.
- (2 points) List the points A-J that are global maxima.

Problem 3) Graphing (10 points) No justifications are needed.

Match the functions  $f$  a) to h) with the second derivatives functions 1) to 8). Every wrong box is a point off.

 <p>a) → <input type="checkbox"/></p>	 <p>b) → <input type="checkbox"/></p>	 <p>c) → <input type="checkbox"/></p>	 <p>d) → <input type="checkbox"/></p>
 <p>e) → <input type="checkbox"/></p>	 <p>f) → <input type="checkbox"/></p>	 <p>g) → <input type="checkbox"/></p>	 <p>h) → <input type="checkbox"/></p>

 <p>5)</p>	 <p>6)</p>	 <p>7)</p>	 <p>8)</p>

Problem 4) Continuity (10 points)
-----------------------------------

Which of the following functions are continuous on  $[-1, 1]$ ? As usual we extend the domain of definition to points, where a continuation is possible. In each case make the decision “continuous” or “not continuous” and also point to the  $x$ -value or values which need special attention.

a) (2 points)  $f(x) = \frac{x^6-1}{x^2-1}$

b) (2 points)  $f(x) = \frac{\sin(\sin(x))}{\sin(\sin(\sin(x)))}$ .

c) (2 points)  $f(x) = \frac{\sin^2(x)}{2+\sin(x^2)}$

d) (2 points)  $f(x) = \ln|x|e^x$

e) (2 points)  $f(x) = \frac{\sin(\tan(x))}{\sin(x)}$

(\*) As usual, we extend continuity to functions for which a continuation is possible to initially not defined points, like  $f(x) = (x^2 - 1)/(x - 1)$ , which is considered continuous everywhere because we can fill in a function value for  $x = 1$  which makes it continuous.

Problem 5) Derivatives (10 points)
------------------------------------

Find the derivatives of the following functions. In each case, indicate which differentiation rule you use.

a) (2 points)  $f(x) = \frac{1}{1+e^x}$ .

b) (2 points)  $f(x) = \cos(x) \sin(x)$ .

c) (2 points)  $f(x) = \frac{1+x^3}{1+x^2}$ .

d) (2 points)  $f(x) = \arctan(7x) + \sin(3x)$ .

e) (2 points)  $f(x) = \ln(3x) + \ln(5x)$ .

Problem 6) Limits (10 points)
-------------------------------

Find the limits  $\lim_{x \rightarrow 0} f(x)$  for each of the following functions:

a) (2 points)  $f(x) = \frac{e^{7x} - 1}{e^{4x} - 1}$ .

b) (2 points)  $f(x) = \frac{x-1}{x+1}$ .

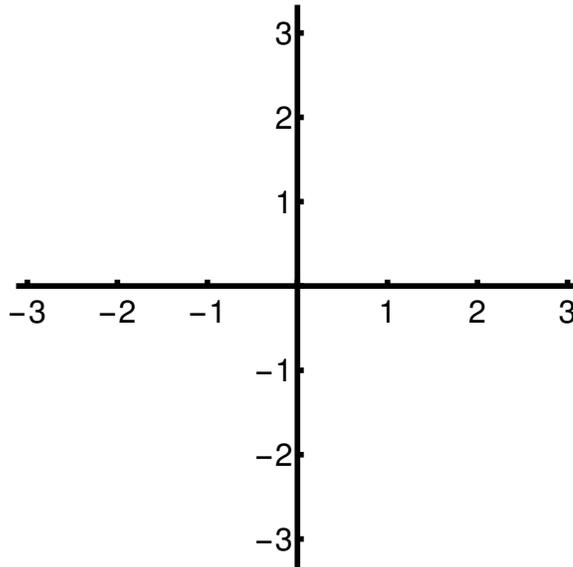

c) (2 points)  $f(x) = \frac{\arctan(x)}{\sin(x)}$ .

d) (2 points)  $f(x) = \frac{\ln(x^3)}{\ln(x^2)}$ .

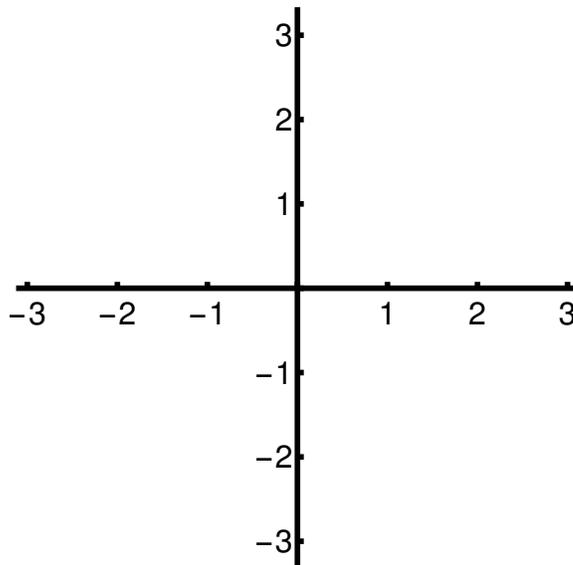

e) (2 points)  $f(x) = \frac{\sin(3x) \sin(5x)}{\sin(7x) \sin(2x)}$ .

Problem 7) Functions (10 points) no explanations needed

a) (5 points) Draw the graph of the natural log function  $f(x) = \log|x| = \ln|x|$ . Make sure you get the roots and asymptotes correct.

b) (5 points) Draw the graph of the arctan function  $f(x) = \arctan(x)$ . Make sure you get the roots and asymptotes correct.

Problem 8) Extrema (10 points)
--------------------------------

a) (3 points) Find all the critical points of the function

$$f(x) = x^3 - 3x + 1 .$$

b) (3 points) Use the second derivative test to classify the critical points of  $f$ .

c) (2 points) On the interval  $[-3, 3]$ , where is the global maximum, and where is the global minimum?

d) (2 points) Which theorem assures that there is a global maximum and a global minimum on  $[-3, 3]$ ?

Problem 9) Algebra (10 points)

a)	$(e^x)^y$	
b)	$e^{x+y}$	
c)	$\ln(xy)$	
d)	$\frac{\tan(x)}{\sin(x)}$	
e)	$\frac{x^9}{x^3}$	

Choose from the following expressions.

- $1/\cos(x)$
- $\cos(x)/\sin^2(x)$ .
- $e^x e^y$
- $\ln(x + y)$
- $e^x + e^y$
- $e^{(xy)}$
- $x^6$
- $\ln(x) - \ln(y)$
- $e^{(x^y)}$
- $\log(x) + \log(y)$
- $x^3$
- $\cos(x)$

Problem 10) Linearization (10 points, 5 points each)

a) (5 points) Use linearization to estimate  $\ln(e^2 + 0.1)$ .

b) (5 points) Use linearization to estimate  $\sin(\frac{\pi}{2} - 0.1)$ .
