

# Lecture 25

## Fundamental Theorem

### Line Integrals

# *Reminders*

2. Midterm 11/10/2022: 5:30-7:30

Focus on 15-25 Psets. So, today's lecture is the last topic. So, CURVES, SURFACES, Line and surface INTEGRALS, Linear and Quadratic APPROXIMATION, GREEN and FTOLI are the main topics.

# *Table of Contents*

1) The Theorem

2) How to get the Potential

3) Examples

4) Integral Theorems

5) Worksheets

*Fundamental Theorem*

# Fundamental Theorem of calculus

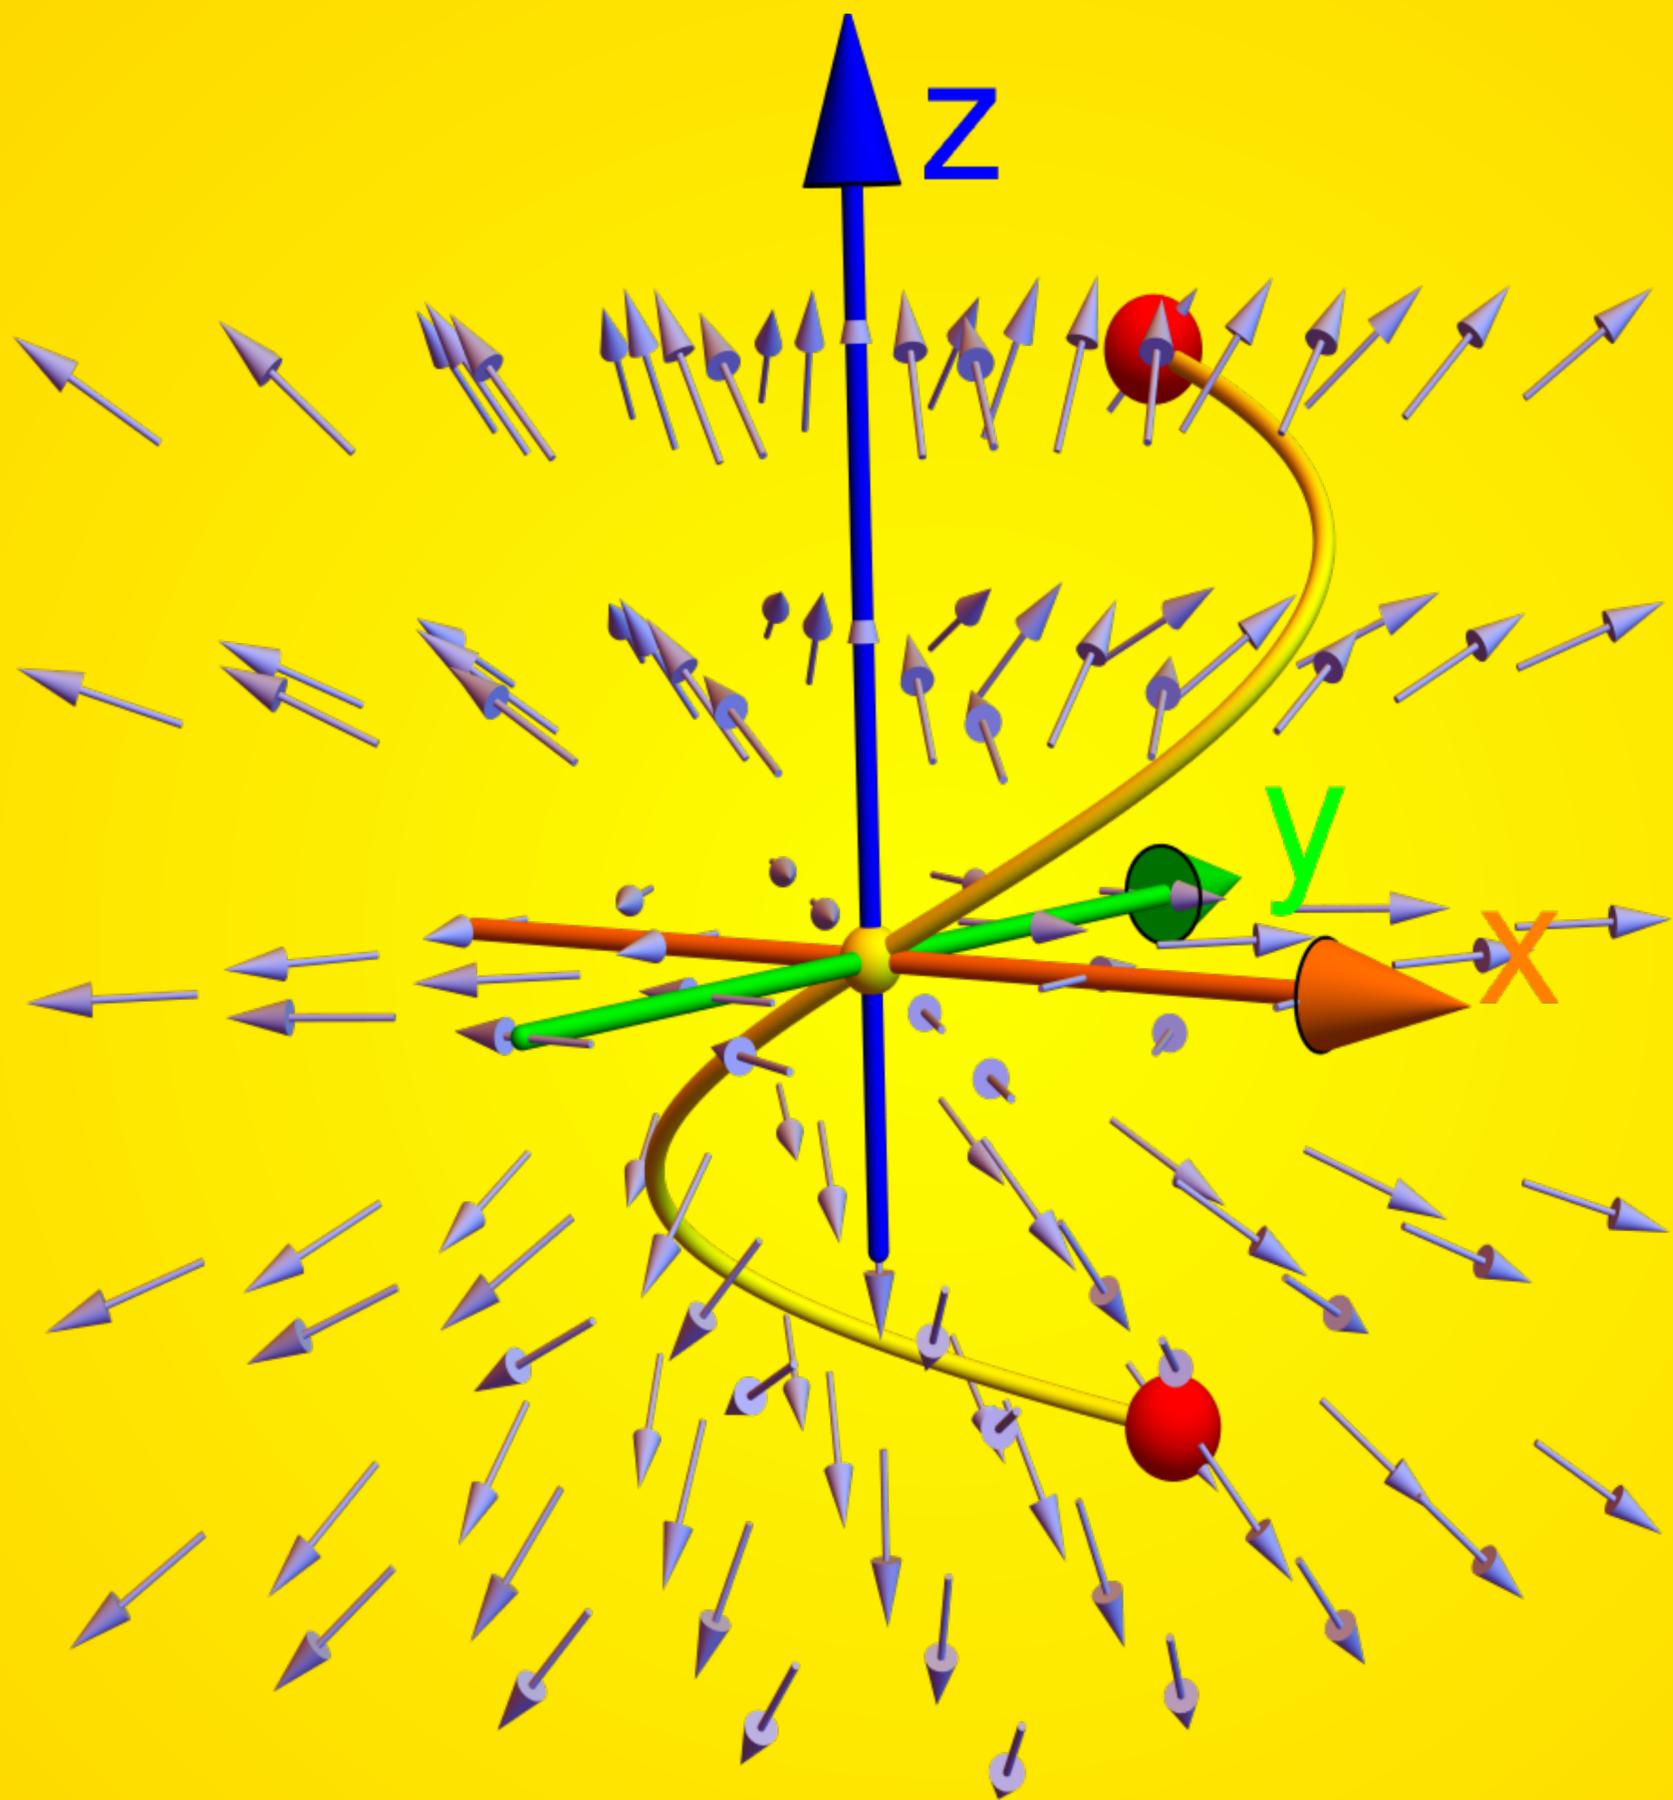

$$\int_a^b f'(t) dt = f(b) - f(a)$$

$$\frac{d}{dx} \int_a^x f(t) dt = f(x)$$

*Look at the sour*

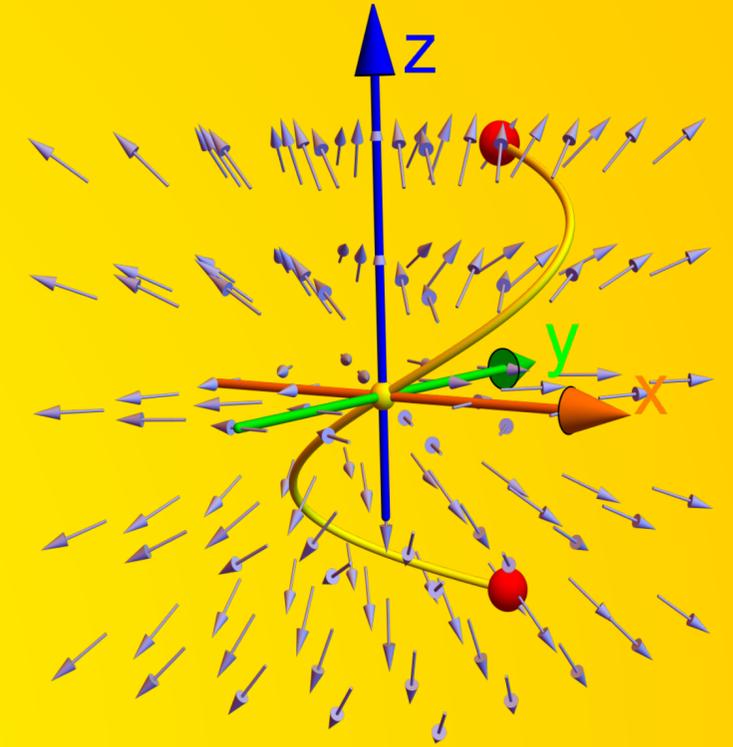

*faces of the inventors!*

# Fundamental Theorem

$$\vec{F} = \nabla f$$

$$\int_C \vec{F} \cdot d\vec{r} = f(B) - f(A)$$

*Proof*

Integrate  $\frac{d}{dt} f(\vec{r}(t)) = \nabla f(\vec{r}(t)) \cdot \vec{r}'(t)$

$$f(B) - f(A) = \int_a^b \frac{d}{dt} f(\vec{r}(t)) dt = \int \nabla f(\vec{r}(t)) \cdot \vec{r}'(t) dt = \int_C \vec{F} \cdot d\vec{r}$$

# Example

Find the line integral of

$$\vec{F}(x, y) = \langle yx + x^2, y^2 \rangle$$

along the path

$$\vec{r}(t) = \langle t + \sin(\pi t), \cos(\pi \cos(\pi t)) \rangle$$

from  $t=0$  to  $t=1$

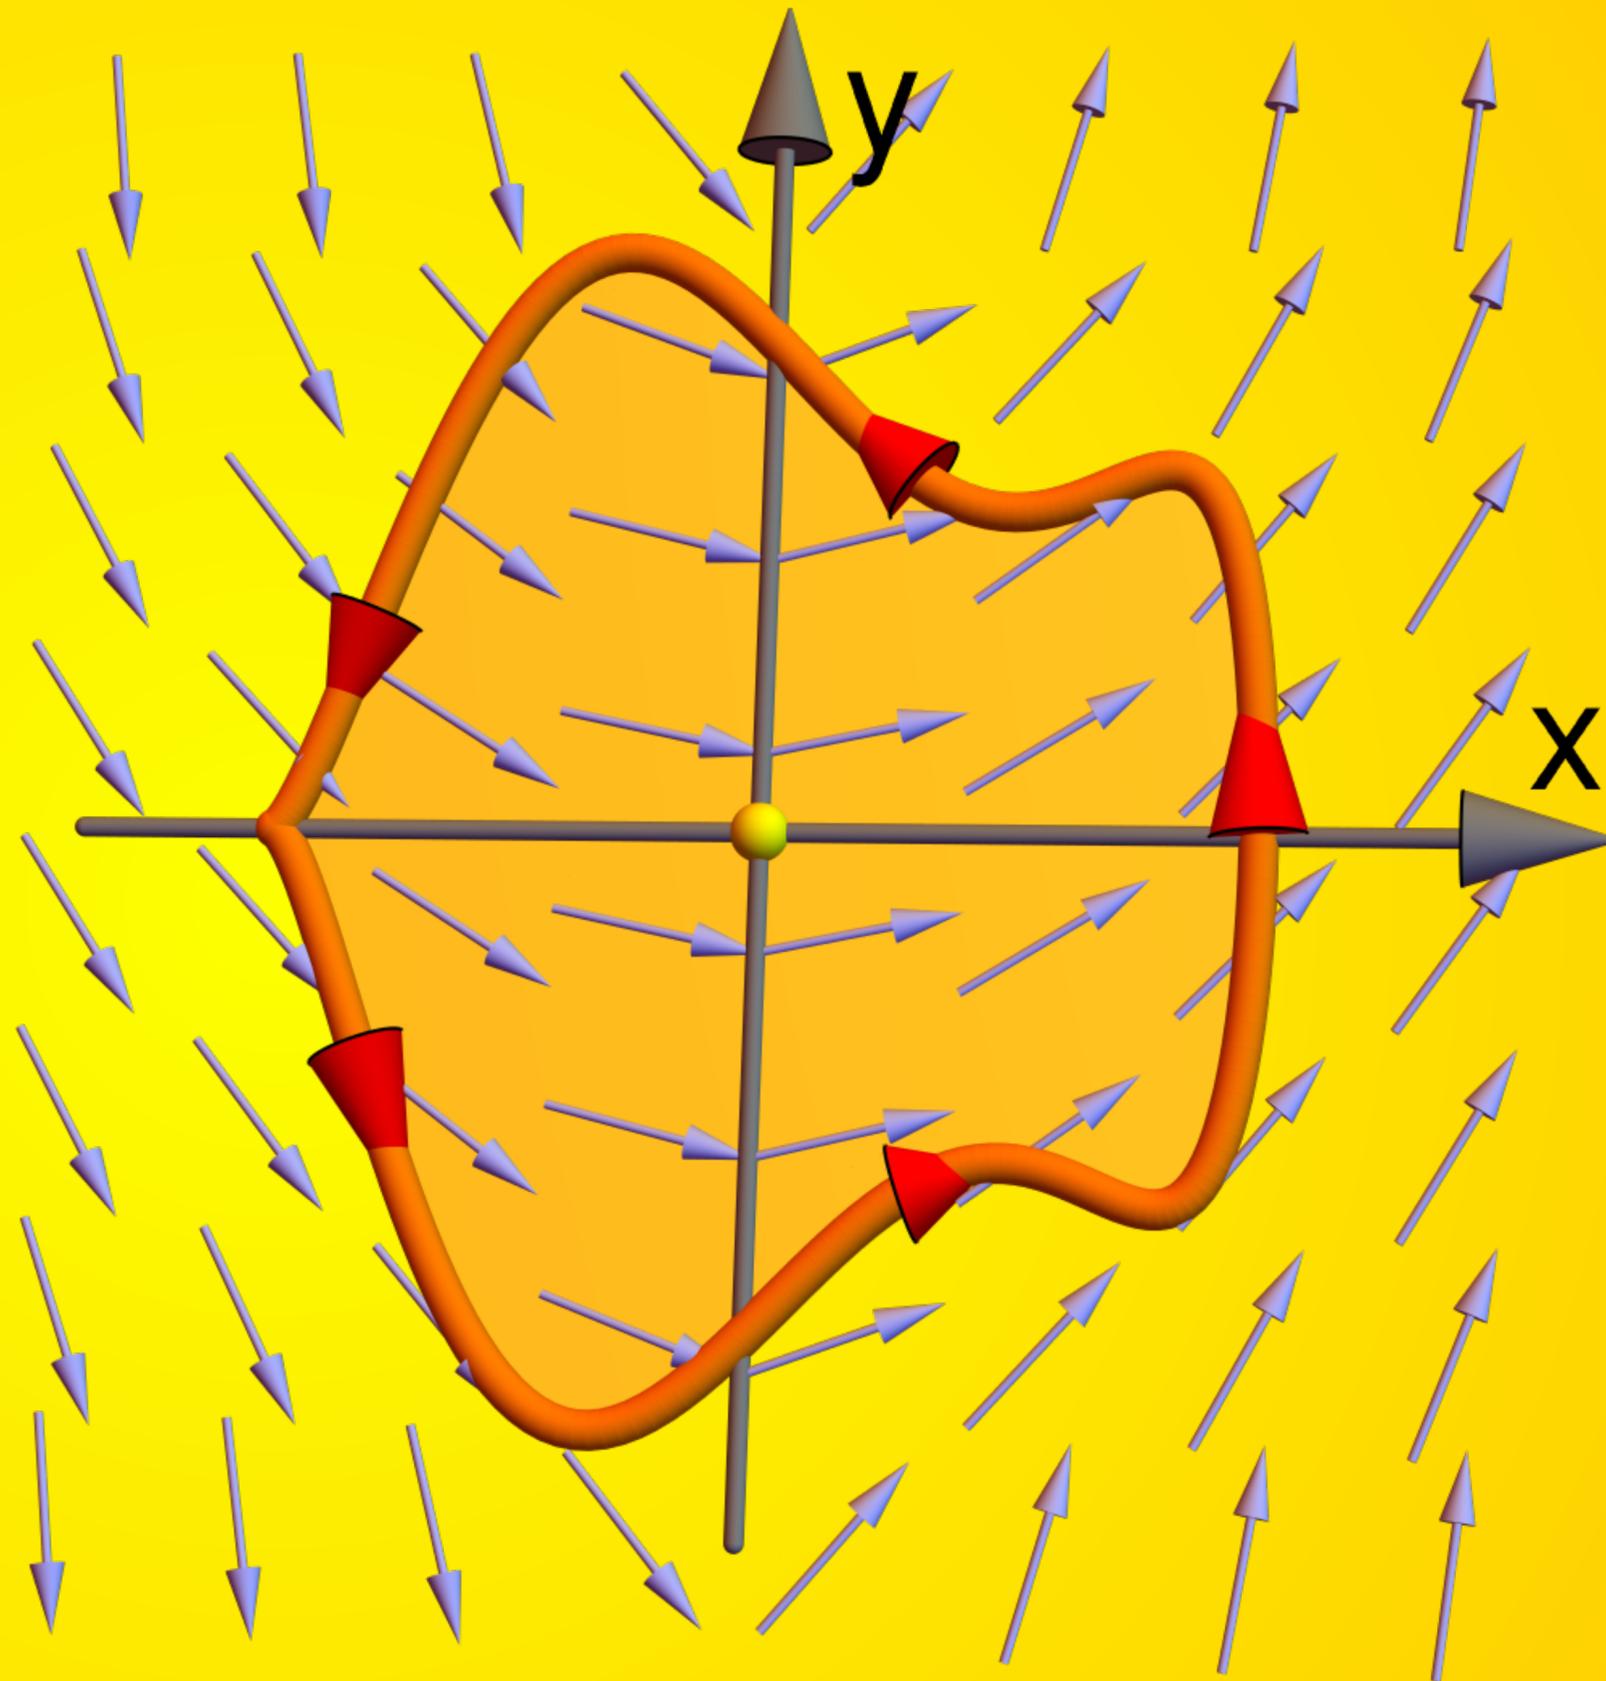

*How to get the potential*

$$\vec{F}(x, y) =$$

$$\langle 4x^3y + 3x^2 + e^y \cos(x), x^4 + e^y \sin(x) \rangle$$

*Relation with Green*

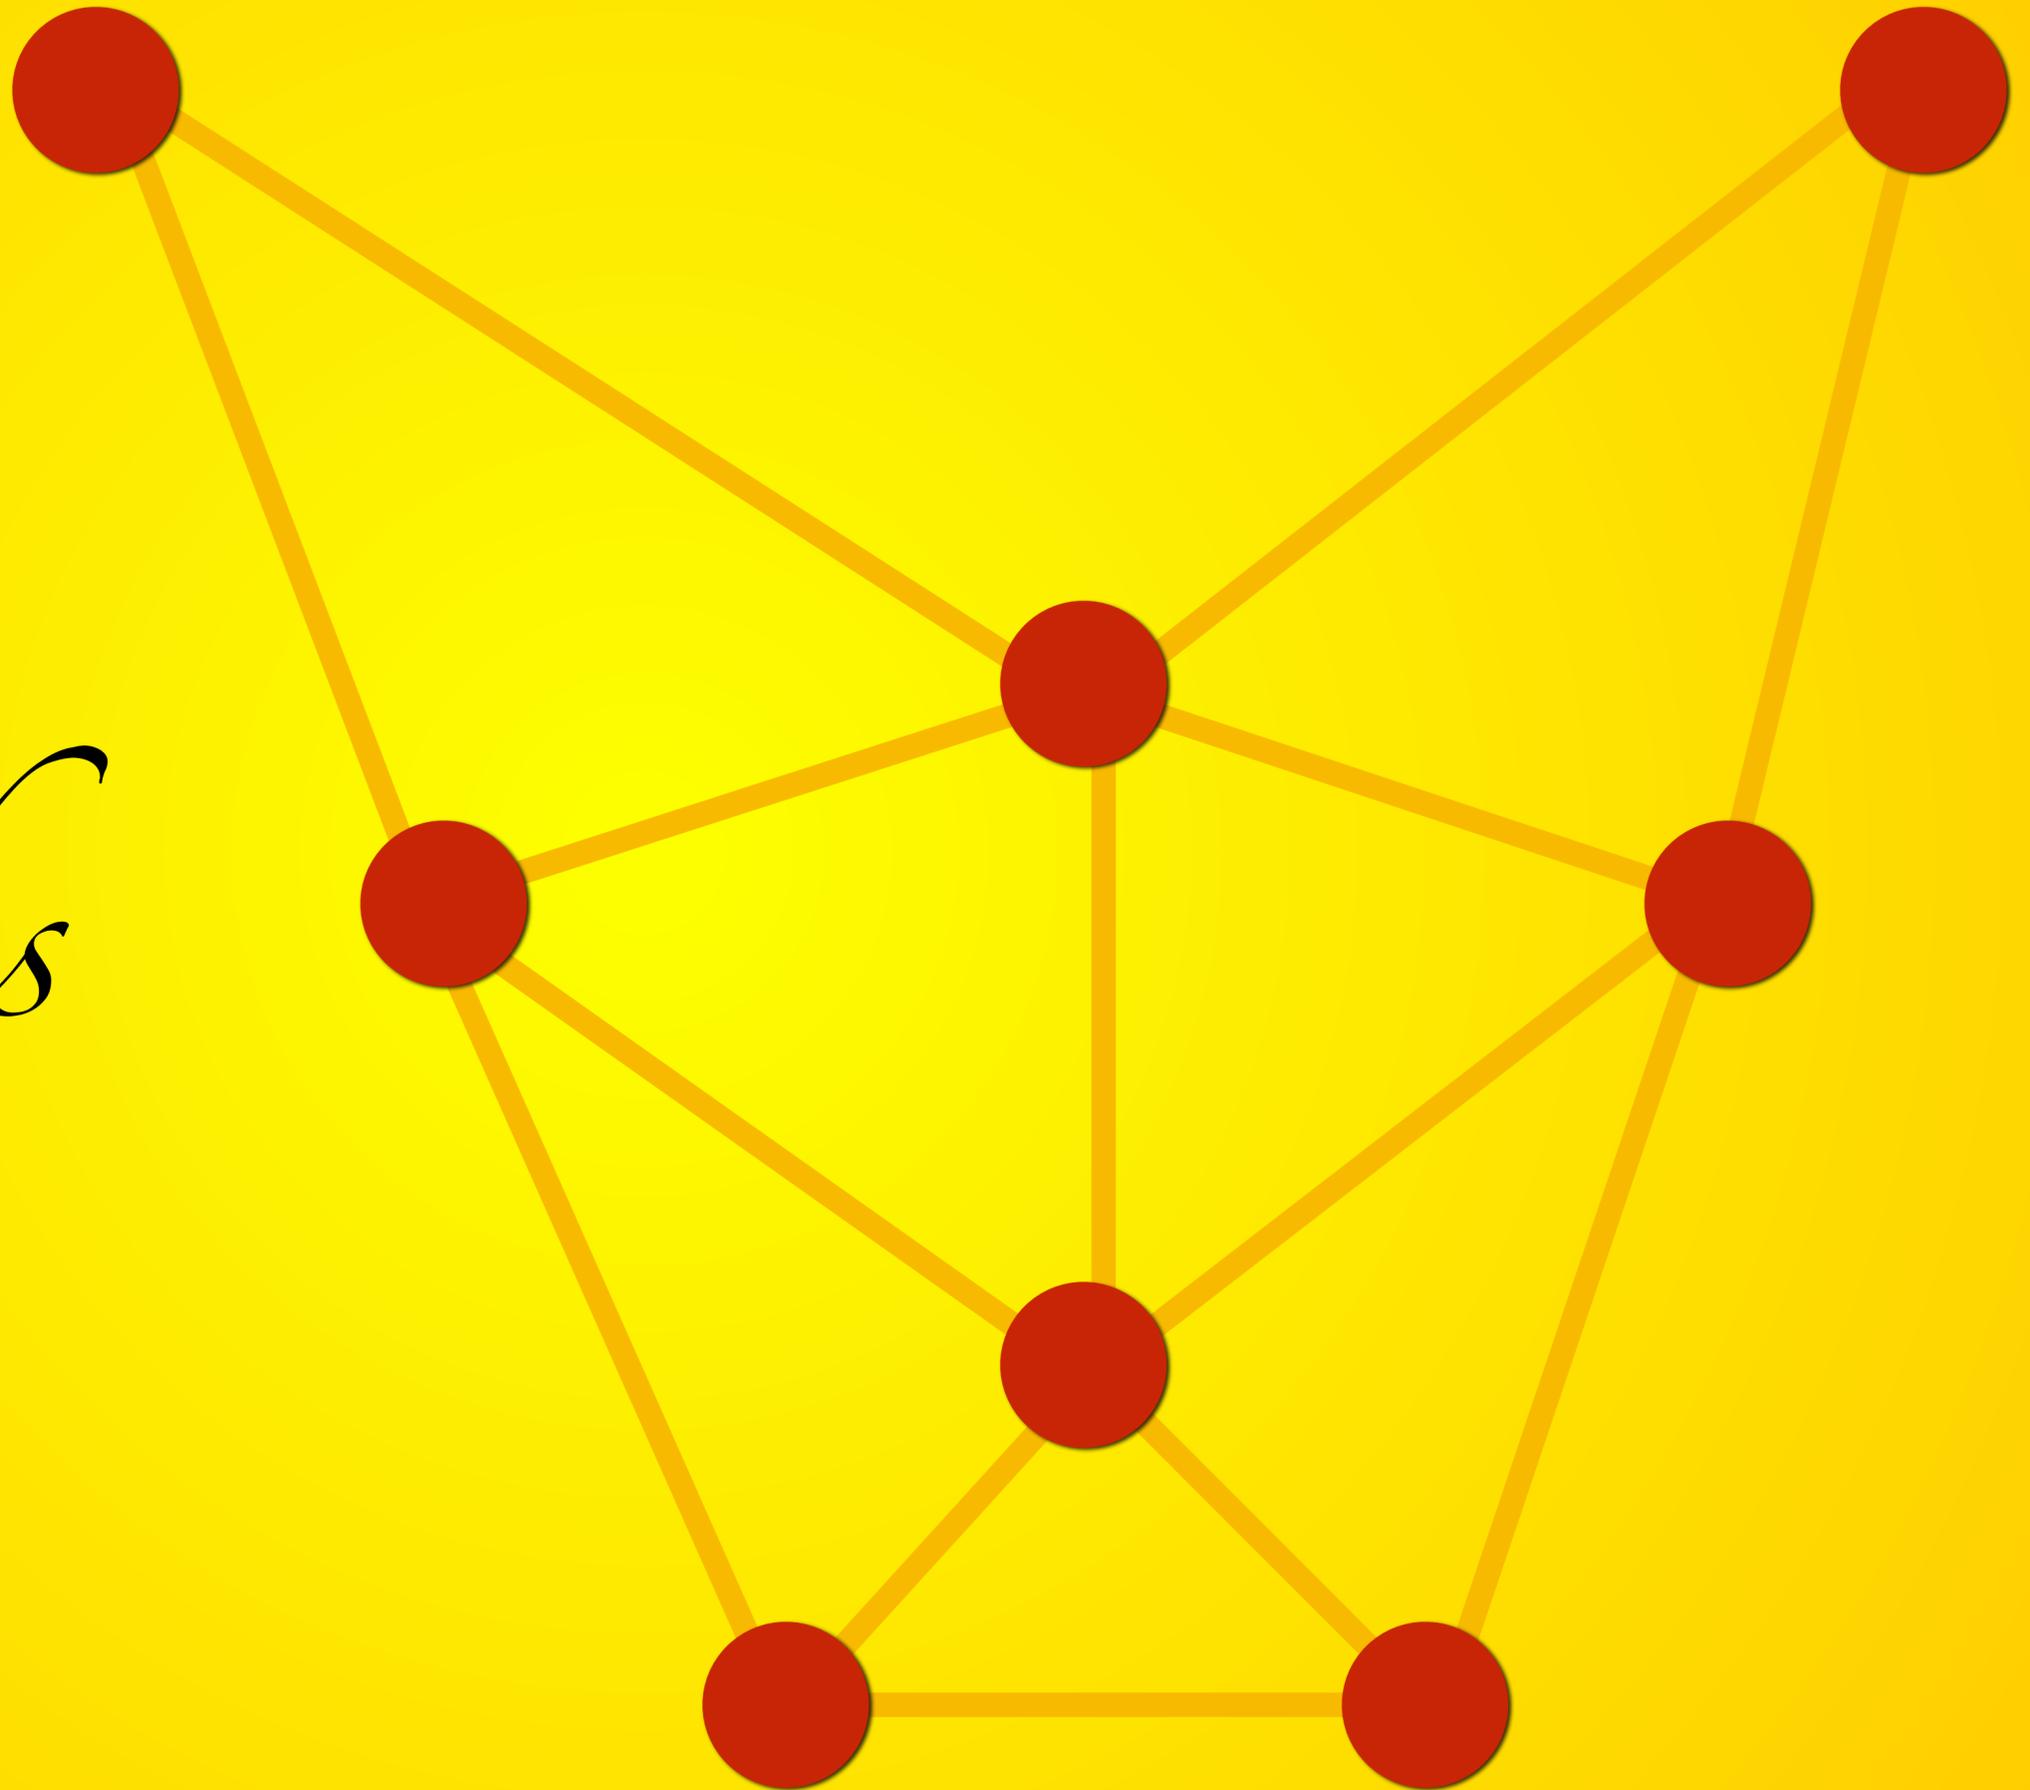

What happens if  $F$  is a gradient field?

What will your kids learn  
in college? What about  
your grand kids?

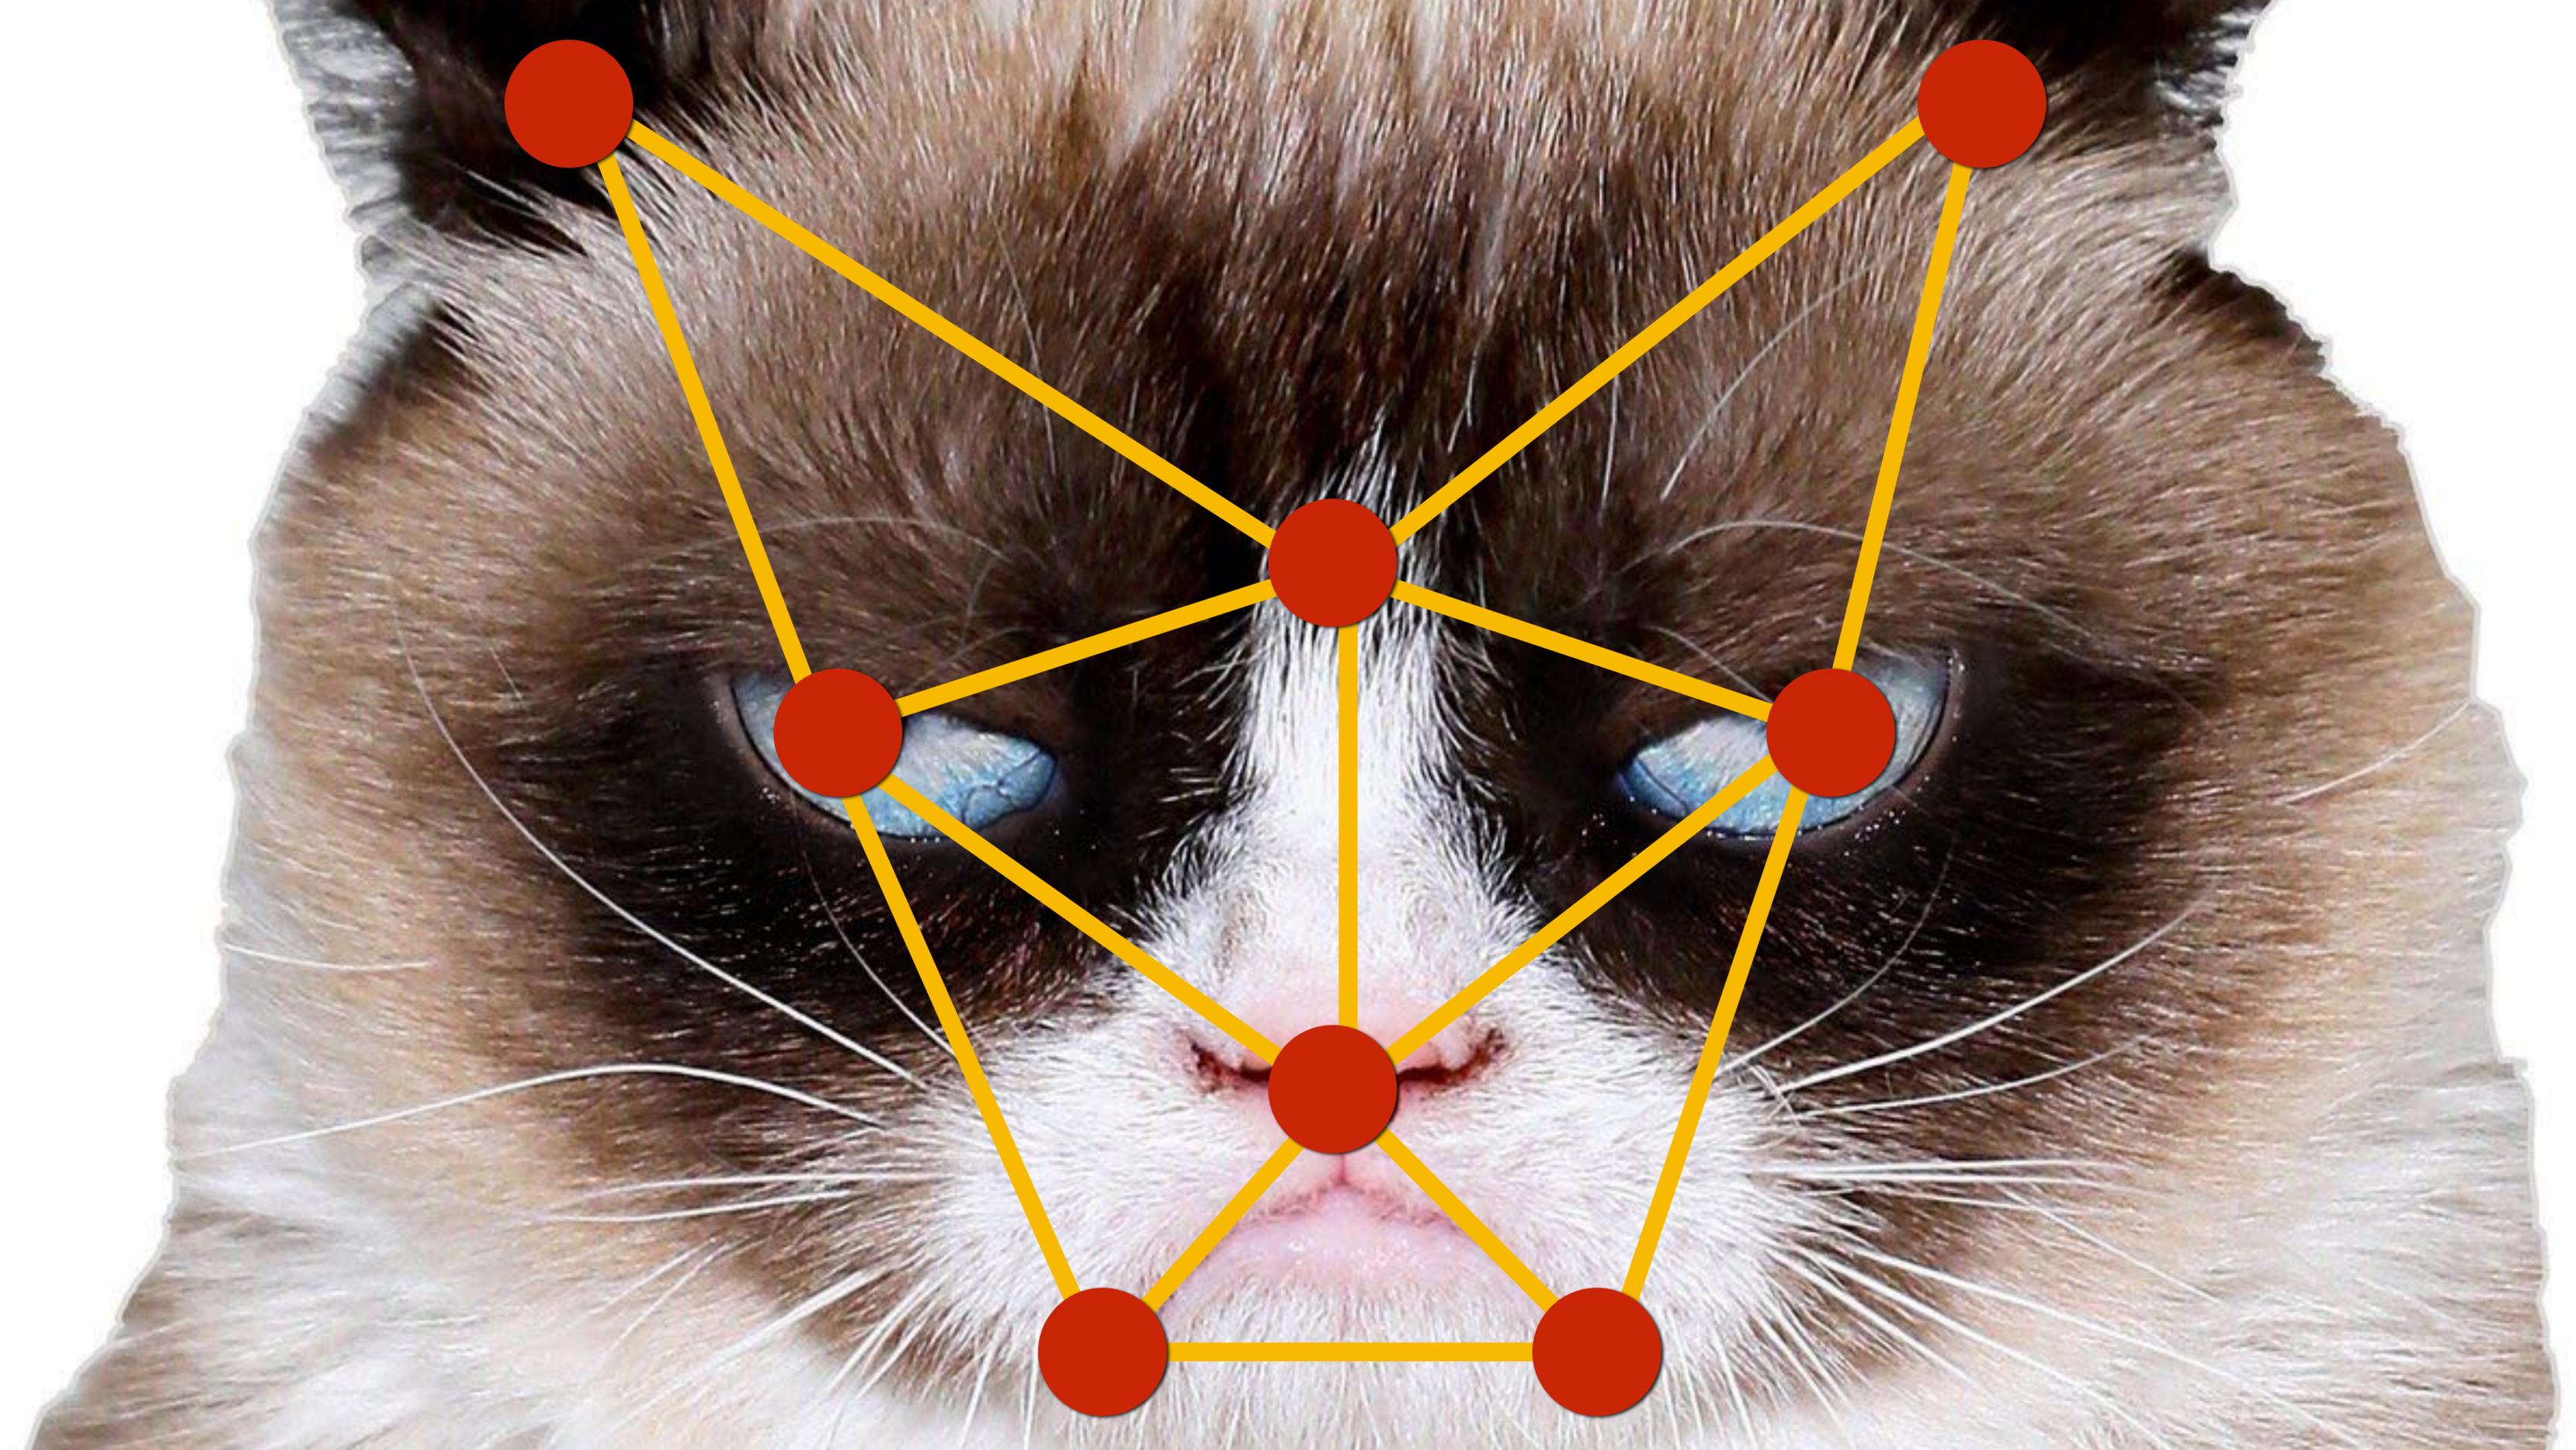

*Quantum Calculus!*

*Networks*

*Networks*

Nodes

Connections =  $dr$

Triangles =  $dA$

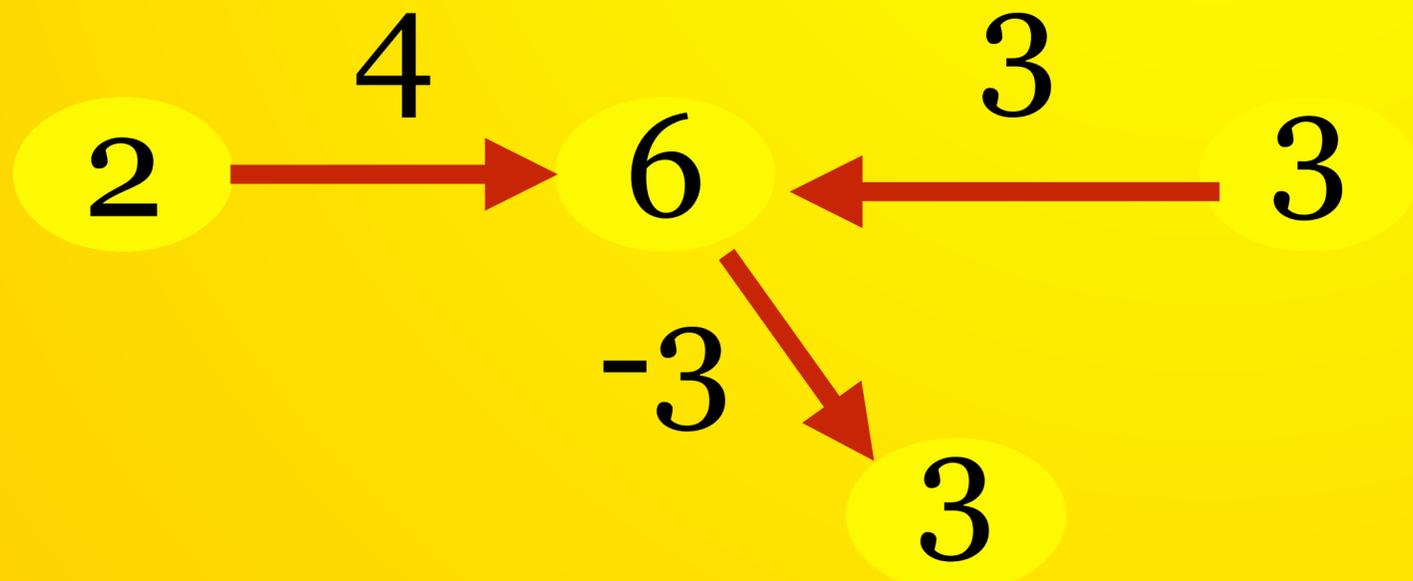

# Gradient

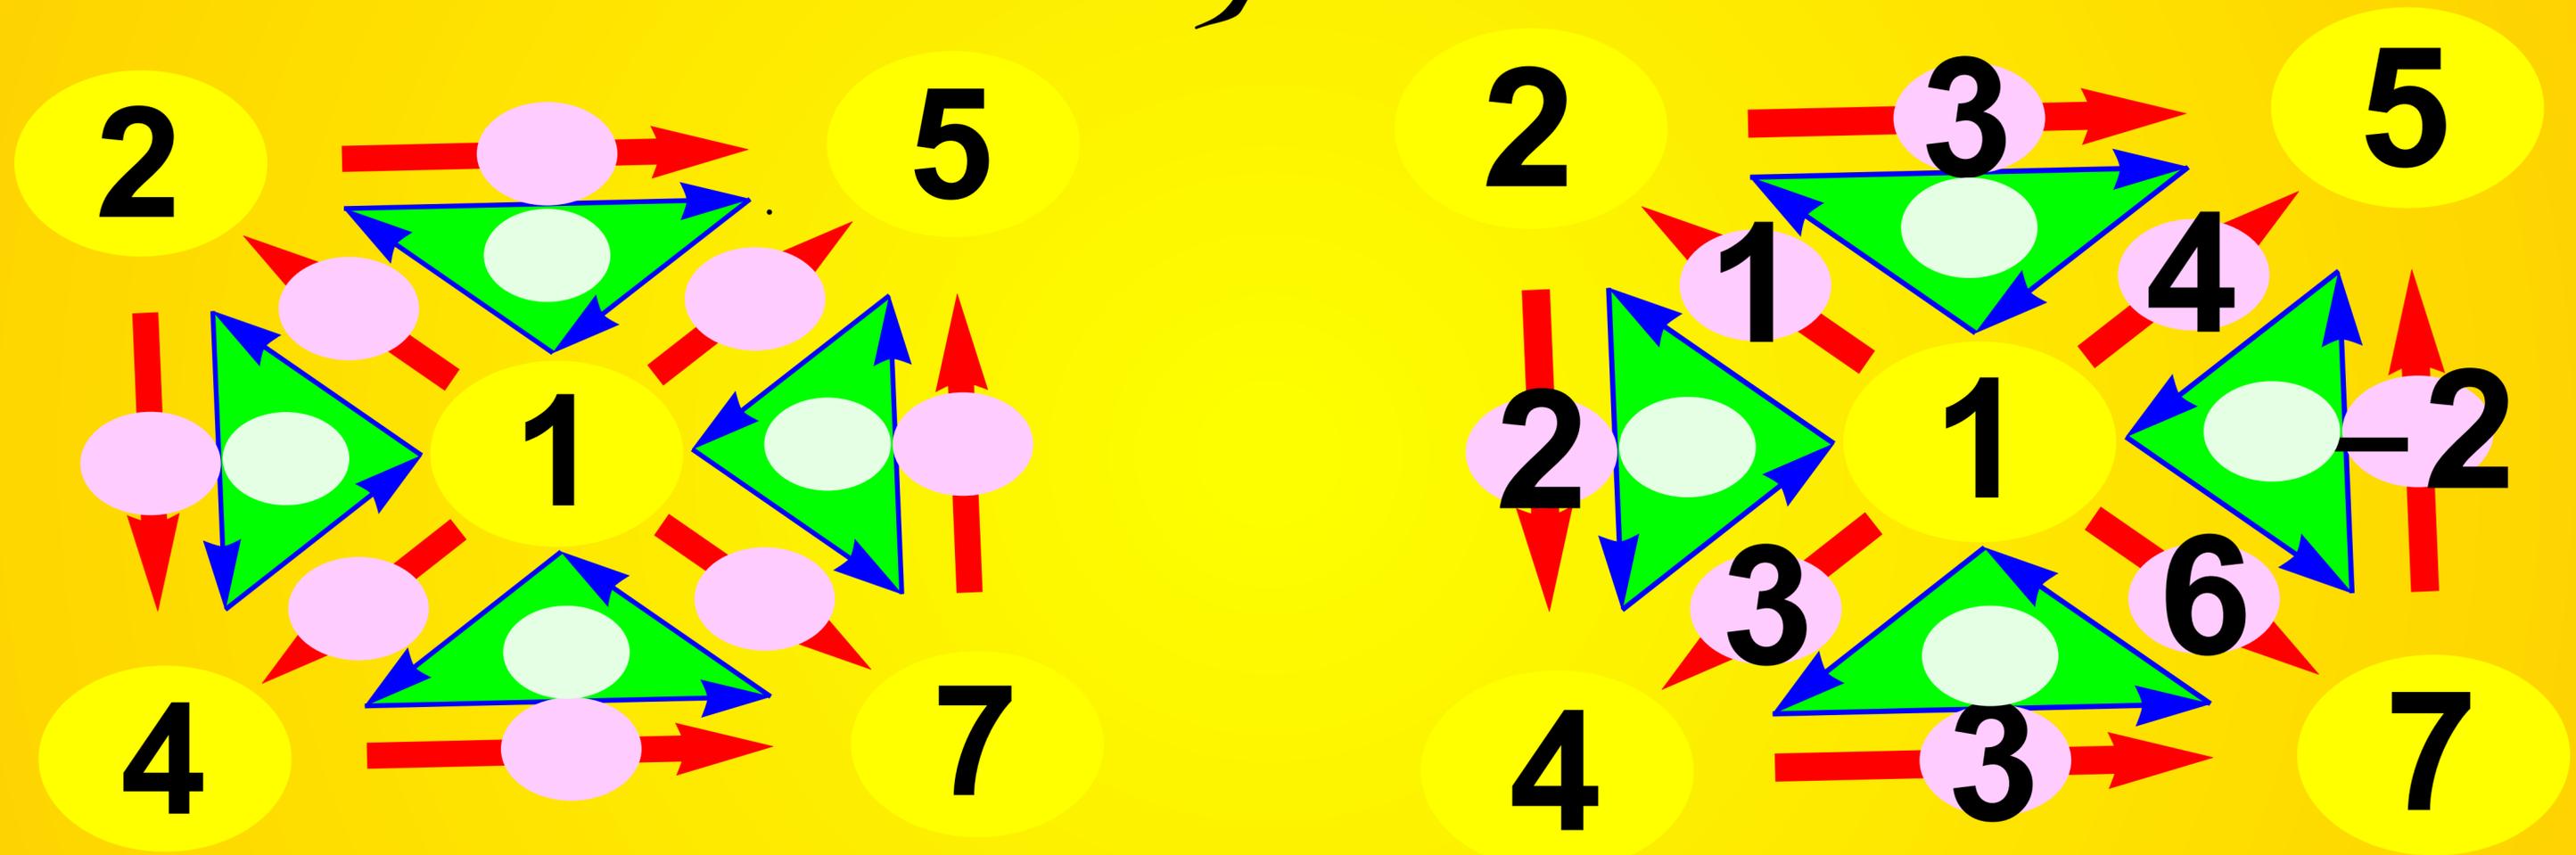

Gradient

$$\nabla f(a,b) = f(b) - f(a)$$

*Example:*

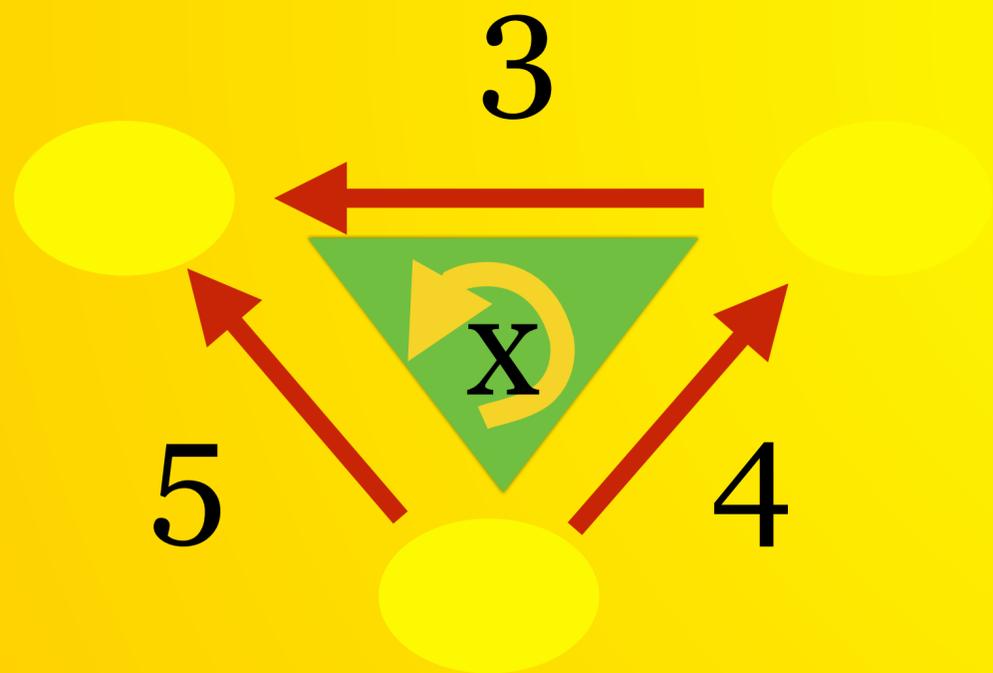

$f$

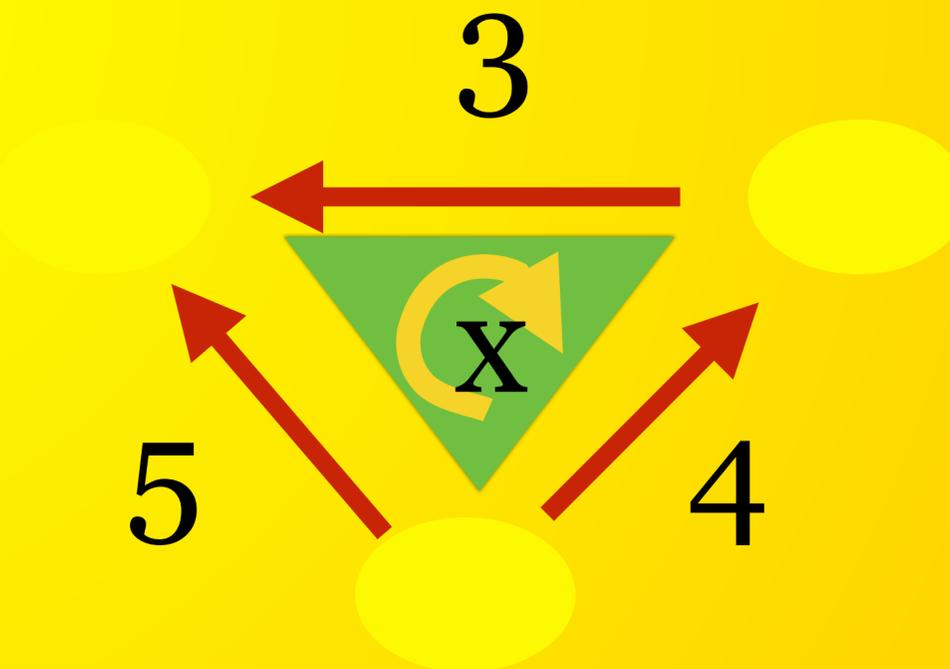

$$F = \nabla f$$

# *Curl*

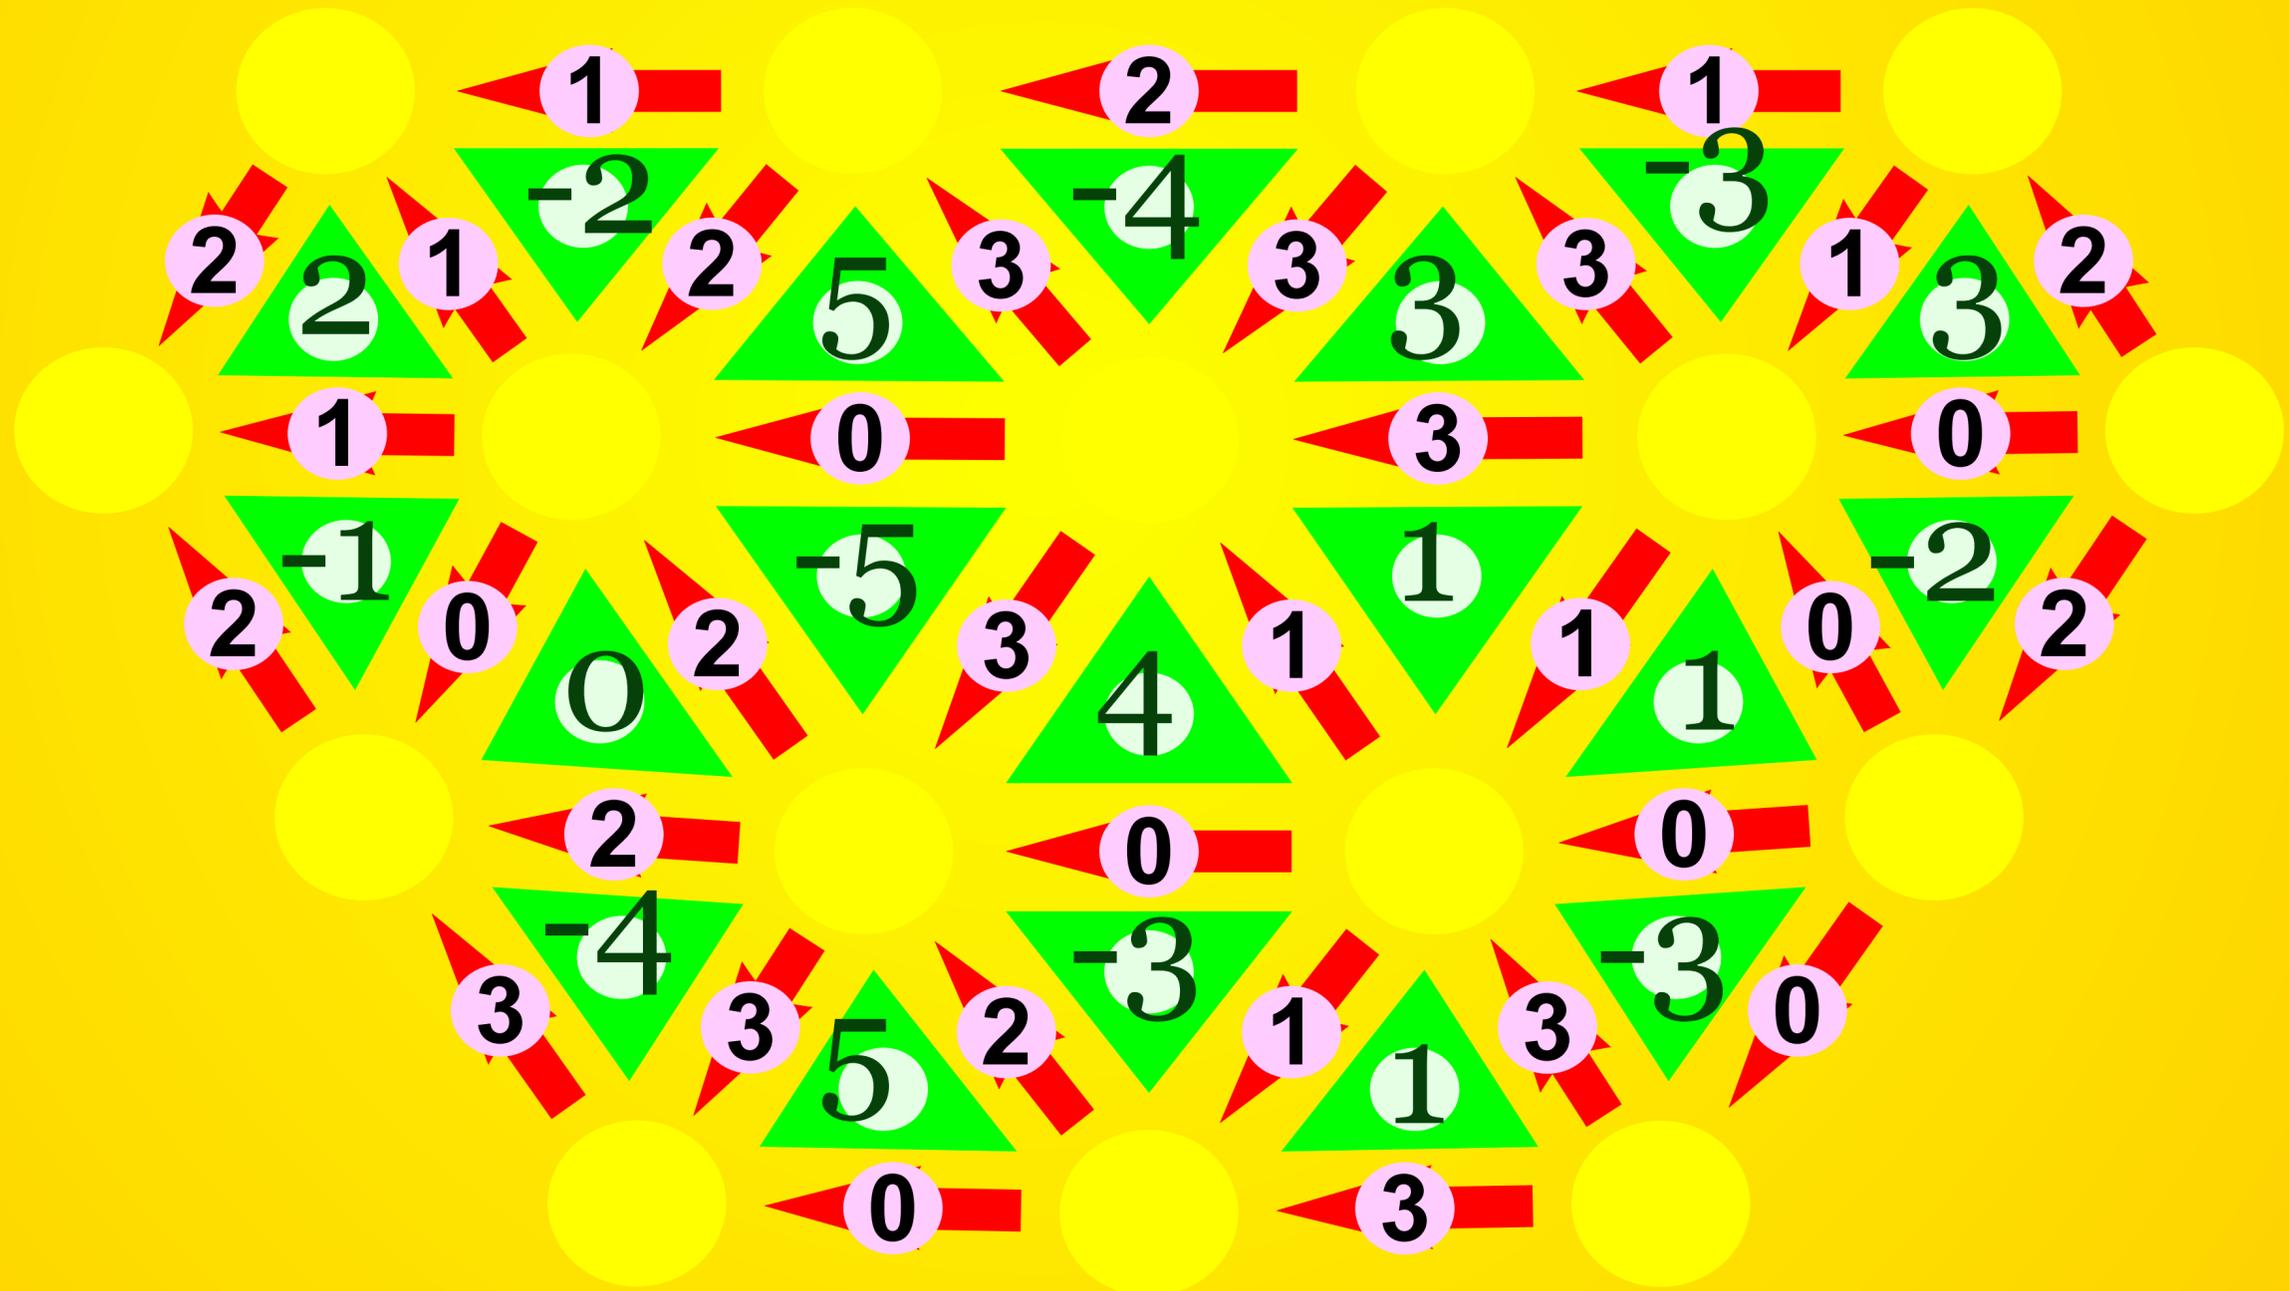

$$\text{curl}(F)(x) = 4 + 3 - 5 = 2$$

$$\text{durl}(F)(x) = 5 - 3 - 4 = -2$$

*Green's theorem*

$$\iint_G \vec{F} \cdot d\vec{A} = \int_C \vec{F} \cdot d\vec{r}$$

*THE END*
