

7/25/2013 SECOND HOURLY PRACTICE III Maths 21a, O.Knill, Summer 2013

Name:

- Start by printing your name in the above box.
- Try to answer each question on the same page as the question is asked. If needed, use the back or the next empty page for work. If you need additional paper, write your name on it.
- Do not detach pages from this exam packet or unstaple the packet.
- Provide details to all computations except for problems 1-3.
- Please write neatly. Answers which are illegible for the grader can not be given credit.
- No notes, books, calculators, computers, or other electronic aids can be allowed.
- You have 90 minutes time to complete your work.

Problem 1) True/False questions (20 points), no justifications needed

Mark for each of the 20 questions the correct letter. No justifications are needed.

- | | | |
|-----|---|---|
| 1) | <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">T</div> <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">F</div> | The partial differential equation $u_t = u_{xx}$ is called the heat equation. |
| 2) | <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">T</div> <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">F</div> | Every function $f(x, y)$ in 2 variables has either a local maximum or a local minimum or a saddle point. |
| 3) | <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">T</div> <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">F</div> | If $\iint_R f(x, y) \, dxdy = 0$, then the function $f(x, y)$ is everywhere zero on $R = \{x^2 + y^2 \leq 1\}$. |
| 4) | <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">T</div> <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">F</div> | If f has a local maximum at $(1, 0)$ and $g(x, y) = x^2 + y^2 = 1$ is a constraint then the Lagrange equations $\nabla f = \lambda \nabla g, g = 1$ are satisfied. |
| 5) | <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">T</div> <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">F</div> | The directional derivative is always smaller than the length of the gradient. |
| 6) | <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">T</div> <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">F</div> | The linearization of a function $f(x, y)$ at $(0, 0)$ is a function of the form $L(x, y) = ax + by + c$. |
| 7) | <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">T</div> <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">F</div> | The surface area of a surface $\vec{r}(u, v) = \langle x(u, v), y(u, v), z(u, v) \rangle$ defined on $(u, v) \in R$ is smaller or equal to than $\int \int_R \vec{r}_u \cdot \vec{r}_v \, dudv$. |
| 8) | <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">T</div> <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">F</div> | A rectangle is both type I and type II. |
| 9) | <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">T</div> <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">F</div> | If the function $D(x, y) = f_{xx}f_{yy} - f_{xy}^2$ is negative everywhere, then every critical point of f is a saddle point. |
| 10) | <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">T</div> <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">F</div> | If two functions f and g have the same critical points, then $f = \lambda g$. |
| 11) | <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">T</div> <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">F</div> | If (x, y) is not a critical point, then the directional derivative $D_{\vec{v}}f(x, y)$ can take both positive and negative values for different choices of $\vec{v}$. |
| 12) | <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">T</div> <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">F</div> | Using linearization of $f(x, y) = x/y$ we can estimate $1.01/1.1 = f(1.01, 1.1) \sim 1 + 0.01 - 0.1 = 0.91$. |
| 13) | <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">T</div> <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">F</div> | If $(1, 1)$ is a local maximum, then $D = f_{xx}f_{yy}^2 - f_{xy}^2 \geq 0$. |
| 14) | <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">T</div> <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">F</div> | $\int_0^2 \int_0^3 f(x, y) \, dxdy = \int_0^2 \int_0^3 f(x, y) \, dydx$ for any continuous function $f(x, y)$. |
| 15) | <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">T</div> <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">F</div> | If $\vec{r}(t)$ is a curve for which the speed is 1 at all times and f is a function, then $d/dt f(\vec{r}(t)) = D_{\vec{r}'(t)}(f)$. |
| 16) | <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">T</div> <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">F</div> | Assume f is zero on the boundary of the unit square $R = \{0 \leq x \leq 1, 0 \leq y \leq 1\}$, then $\int_0^1 \int_0^1 f_{xy}(x, y) \, dydx = 0$. |
| 17) | <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">T</div> <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">F</div> | If $f_{yy}(x, y) < 0$ for all x, y , then f can not have any local minimum. |
| 18) | <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">T</div> <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">F</div> | The double integral $\int_{-1}^1 \int_{-1}^1 x^2 - y^2 \, dxdy$ is the volume of the solid below the graph of $f(x, y) = x^2 - y^2$ and above the square $-1 \leq x \leq 1, -1 \leq y \leq 1$ in the xy -plane. |
| 19) | <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">T</div> <div style="display: inline-block; border: 1px solid black; padding: 2px 10px; margin: 0 5px;">F</div> | For any function f and any unit vector $\vec{v}$ one has $D_{\vec{v}}(f) + D_{-\vec{v}}(f) = 0$. |

- 20) ☐ T ☐ F The surfaces $x^2 + y^2 + z^2 = 2$ and $x^2 - y^2 + z^2 = 2$ have the same tangent plane at $(1, 0, 1)$.

Problem 2) (10 points) No justifications are needed

a) (6 points) Match the regions with the double integrals. If none applies, put O .

Enter A-F	Integral of Function $f(x, y)$
	$\int_0^{\pi/2} \int_0^\theta f(r, \theta) r \, dr d\theta$
	$\int_0^{\pi/2} \int_0^y f(x, y) \, dx dy$
	$\int_0^{\pi/2} \int_0^x f(x, y) \, dy dx$

Enter A-F	Integral of Function $f(x, y)$
	$\int_0^{\pi/2} \int_\theta^{\pi/2} f(r, \theta) r \, dr d\theta$
	$\int_0^{\pi/2} \int_{\pi/2-y}^{\pi/2} f(x, y) \, dx dy$
	$\int_0^{\pi/2} \int_0^{\pi/2-x} f(x, y) \, dy dx$

b) (4 points) Assume $\vec{v} = \nabla f(1,1) = \langle 3/5, 4/5 \rangle$ and $\vec{r}(t) = \langle 1 + 3t, 1 + 4t \rangle$ and that $L(x,y)$ is the linearization of f at $(1,1)$ and $f(1,1) = 2$. Finally, denote by $ax + by = d$ the tangent line of f at $(1,1)$.

Here is a choice of 5 answers. 4 of them apply above, fill them in. If none should apply, you would enter O .

Expression	Fill in A-E
$D_{\vec{v}}f(1,1)$	
$d/dt f(\vec{r}(t)) _{t=0}$	
$L(2,1)$	
the constant d in the tangent line	

A	5
B	7/5
C	13/5
D	25
E	1

Problem 3) (10 points) (no justifications are needed)

a) (5 points) A function $f(x,y)$ of two variables has level curves as shown in the picture. The arrows are the gradient.

Enter A-E or O if no match	Description
	a local maximum $f(x,y)$.
	a local minimum $f(x,y)$.
	a point, where $f_x = 0$ and $f_y < 0$
	a point, where $f_y = 0$ and $f_x < 0$
	the point among $A - E$, where $\ \nabla f\ $ is largest

b) (5 points) Assume $f(x, y) = x^2 - y^2 + 1$, $g(x, y) = x^2 + y^2 + 1$. Which of the following statements are true (T) or false (F):

Enter T/F	Statement
	$(0, 0)$ is a critical point for f .
	$(0, 0)$ is a critical point for g .
	$(0, 0)$ is a critical point for f under the constraint $g = 1$.
	$(0, 0)$ is a critical point for g under the constraint $f = 1$.
	$(0, 0)$ is a global minimum for g .

Problem 4) (10 points)

A hexagonal shape is made of two equilateral triangles of side length y and a rectangle of length x and width y . The area is

$$f(x, y) = xy + (\sqrt{3}/2)y^2$$

the circumference is

$$g(x, y) = 2x + 4y.$$

Assume the circumference is fixed so that $g(x, y) = 8$. Find the dimensions x, y for which the hexagon has maximal area. Use the method of Lagrange multipliers.

Problem 5) (10 points)

a) (8 points) The face of Lady Gaga - a women of extremes - is modeled by the **Gaga function**

$$f(x, y) = 2y^3 - 3y^2 + x^4 - 2x^2.$$

Classify all critical points of f . Which are maxima, minima or saddle points.

b) (2 points) Is there a global maximum for f or is there no maximal "Gaga"?

Problem 6) (10 points)

Find the surface area of the surface

$$\vec{r}(t, s) = \langle t^2 + 1, s^2 - 1, 1 + \sqrt{2}ts \rangle .$$

for which the parameters satisfy $t^2 + s^2 \leq 9$.

Problem 7) (10 points)

a) (5 points) Find the linearization function $L(x, y)$ of $f(x, y) = \sqrt{x^3 y}$ at $(x, y) = (1, 4)$.

b) (5 points) Estimate

$$\sqrt{0.999^3 \cdot 3.9}$$

by evaluating $L(0.999, 3.9)$.

Problem 8) (10 points)

a) (5 points) Find an equation of the form $ax + by + cz = d$ which gives the tangent plane to the ellipsoid

$$4x^2 + 9y^2 + 16z^2 = 41$$

at the point $(2, 1, 1)$.

b) (5 points) If we intersect the ellipsoid with a plane $z = 1$, we obtain an ellipse $g(x, y) = 4x^2 + 9y^2 = 25$. Find an equation of the form $ax + by = d$ for the tangent line to that level curve $g(x, y) = 25$ at the point $(2, 1)$.

Problem 9) (10 points)

Two underwater robots $\vec{r}(t) = \langle \cos(t), \sin(t) \rangle$ and $\vec{R}(t) = \langle 1 + \sin(t), 1 - \cos(t) \rangle$ circle the just closed BP oil cap in the gulf of Mexico. The oil concentration is an unknown function $f(x, y)$ which is normalized that $f(1, 0) = 0$. The robots measure $D_{\vec{r}'(t)}f = 4$ and $D_{\vec{R}'(t)}f = 5$ at $t = 0$.

a) (5 points) Find the gradient $\nabla f(1, 0) = \langle a, b \rangle$ of f at $(1, 0)$.

b) (5 points) Estimate the oil concentration $f(1.1, 0.02)$ at the point $(1.1, 0.02)$.
